GOOGLE WORKSPACE TRAINING

Google Docs

One-day course review draft

Build and check practical workplace outputs with fictional project data. Labs 1–3 include 53 real stage captures. Remaining routes and learner validation are pending.

Delivered by Asraf · Microsoft Certified Trainer

Google Docs

One-day course review draft · Review draft, version 0.4

Resources: Use the practice files supplied with this review package.

Google, Google Workspace, Gmail, Google Drive, Google Docs, Google Sheets, Google Slides, Google Sites, Gemini and NotebookLM are names associated with Google. This independent training guide is not published or endorsed by Google.

Screenshots show the product at the time of writing. Google updates its apps often, so labels, availability and layouts in your account may differ. This review draft still requires full lab validation.

About the author

Asraf is a Microsoft Certified Trainer and HRD Corp-certified IT trainer based in Malaysia. He has been teaching working professionals since 2008, helping teams at banks, pharmaceutical companies, construction firms, and retailers get real work done with Microsoft 365, Power Platform, Excel, Google Workspace, and, more recently, AI tools like Copilot.

He holds a Bachelor of Information Technology (Multimedia) from the University of Malaya, along with Microsoft certifications in Power BI (PL-300) and AI for business (AB-730). Outside the classroom he writes his own automation tools in Python and Node.js, mostly to save himself from doing the same task twice.

He runs his training practice solo, which means he has personally felt every inefficiency this book tries to fix.

INTRODUCTION

Before you begin

This review book accompanies Google Docs. Work through its chapters in order and keep the original practice inputs unchanged. The same notes and prompts also appear in the local course website.

Current Status

All chapters in this book are written drafts. Most have not yet been executed end to end in the application. The masterclass's reference brief chapter has a tested core path with a recorded recovery prompt; that does not validate the other exercises. Treat VERIFY notes and draft notices as production work still to complete.

What You Need

Use a desktop browser and the Google account approved for the class. Confirm app and AI access beforehand. Edition, administrator controls and language can affect availability.

Download the supplied fictional practice pack. No real client or personnel record is needed. Dataset week fields are relative practice weeks, not an agreed pilot start date.

How to Use the Exercises

Follow the numbered steps, attempt the output and then open the expected-result box. AI wording can vary; source facts and approval conditions must remain correct.

Values and prompts follow the notes. Replace source placeholders before submitting. Inspect proposed edits before applying them. Drafting does not authorise sending, inviting people or publishing.

Course Timing

This course is planned for 1 day, with 390 teaching minutes per day, excluding breaks and lunch. Estimates include practice, checks and discussion and need a classroom pilot.

Each course supplies independent starting inputs. Use a stated recovery file if an earlier output is missing.

Expanded Casework

Revision 0.4 adds casework, independent challenges and evidence gates to every chapter. The original short guided path alone is insufficient. Timings are targets, not measured learner results. Read each case input and keep baseline and scenario files separate.

01

CHAPTER 1

Prepare the Document and Sources

In this chapter you will create a working copy and distinguish source facts from instructions.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 40 minutes: 10 explanation/demonstration, 10 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 30 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A named working document and a separate set of source facts.

> **Status:** real-app reference route captured with 16 stage images. Source register, five questions, three opened links, memo classification and 133-word scope checked. Browser upload and independent challenge remain unverified.

What You Will Learn

- Create a named document from supplied text.
- Distinguish source facts from a draft.
- Keep the working document and source separate.

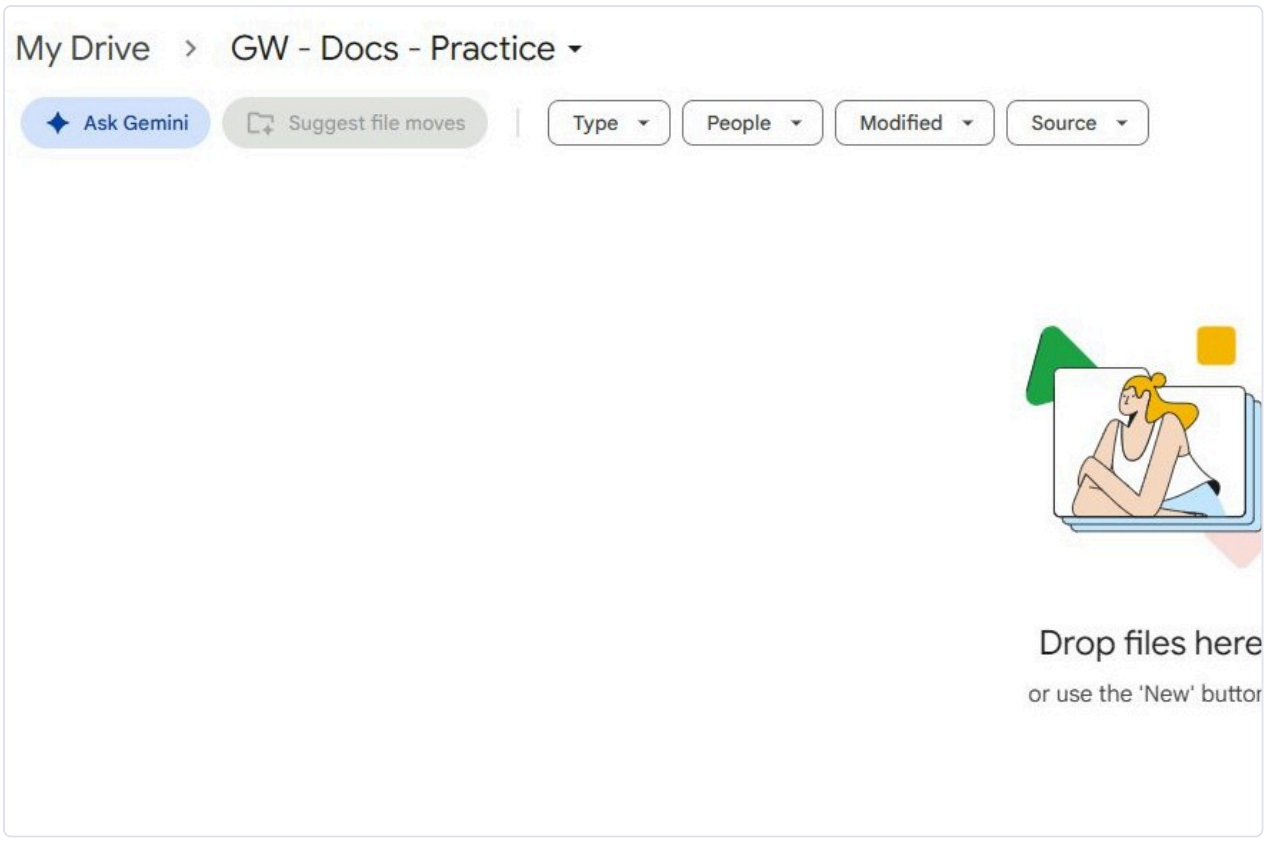

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Download project facts and checked brief. You can take this course without attending the masterclass.

1.1 Prepare a Working Copy

1. In Drive, create a folder named `GW - Docs - Practice`.

2. Open the supplied checked brief text. Create a blank Google Doc in your new folder.
3. Name it `GW - Reporting Procedure - Working`. Paste the supplied brief text into the body.

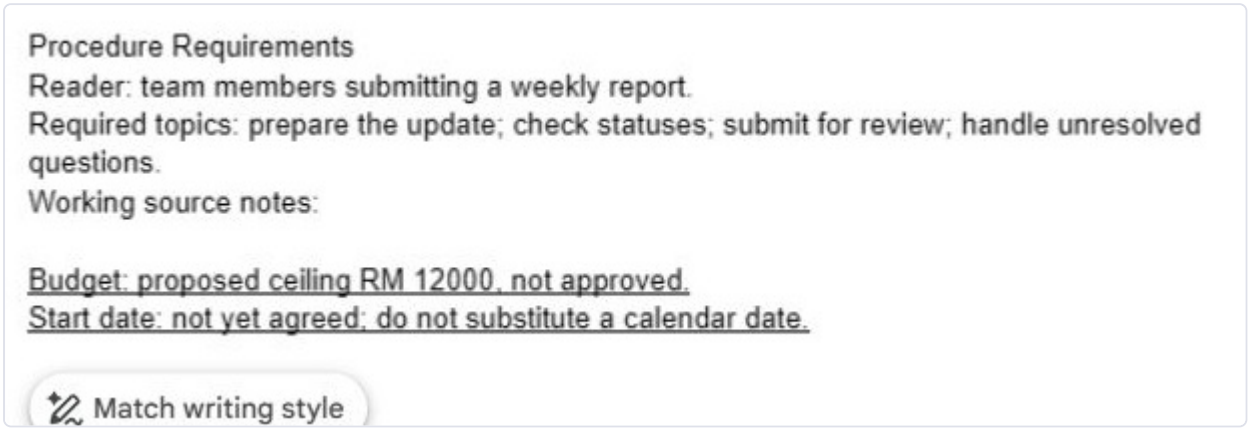

FICTIONAL TRAINING MATERIAL
Project Reporting Pilot
Purpose: test a consistent weekly project reporting process at Seri Maju Projects in Petaling Jaya.
Scope and Outputs: Planning, Procurement and Site Coordination will produce a project brief, task register, weekly status update and project hub. Live construction records, purchasing commitments and external publication are out of scope.
Roles: Aina Rahman is the project coordinator. Farid Hassan is the sponsor.
Schedule: four weeks from an agreed start date, with an update every Friday. Start date: To be confirmed.
Budget: proposed ceiling RM 12000, not approved.
Risk: teams may use different definitions of task status.
Success Measure: all three teams submit on time for the final two weeks.
Decisions Needed: sponsor approval of the budget and pilot start date.

What should you see?

A native Google Doc contains the fictional brief. The original downloaded source remains unchanged.

1.2 Separate Facts and Requirements

1. Read the fact sheet and underline the proposed budget and unresolved start date in your working notes.
2. Add a section named `Procedure Requirements`. Record the intended reader: team members submitting a weekly report.
3. List the required procedure topics: prepare the update, check statuses, submit for review and handle unresolved questions.

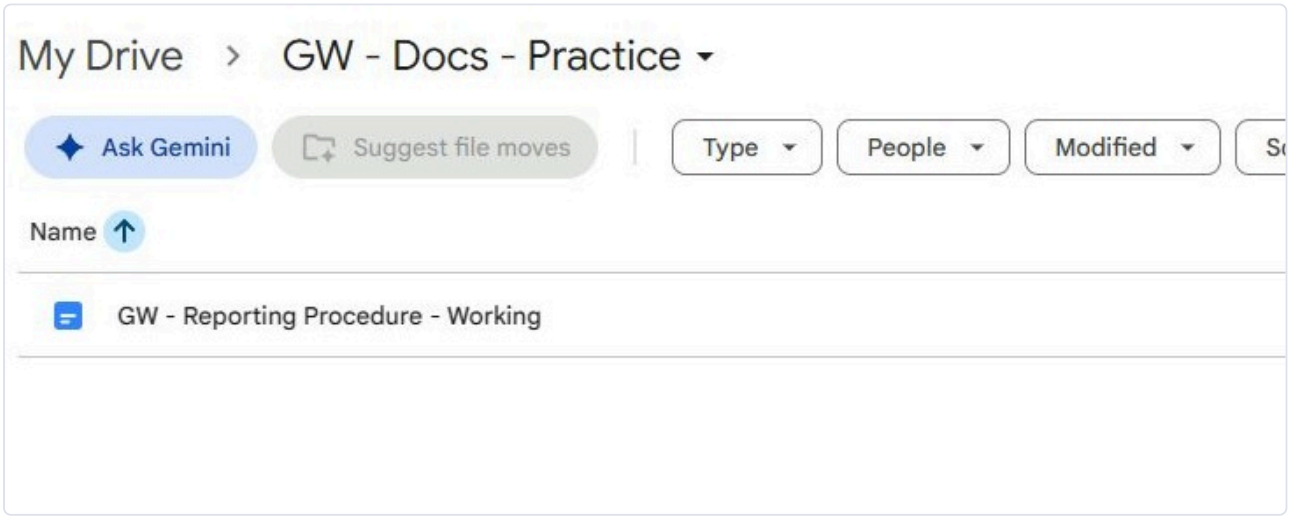

What should you see?

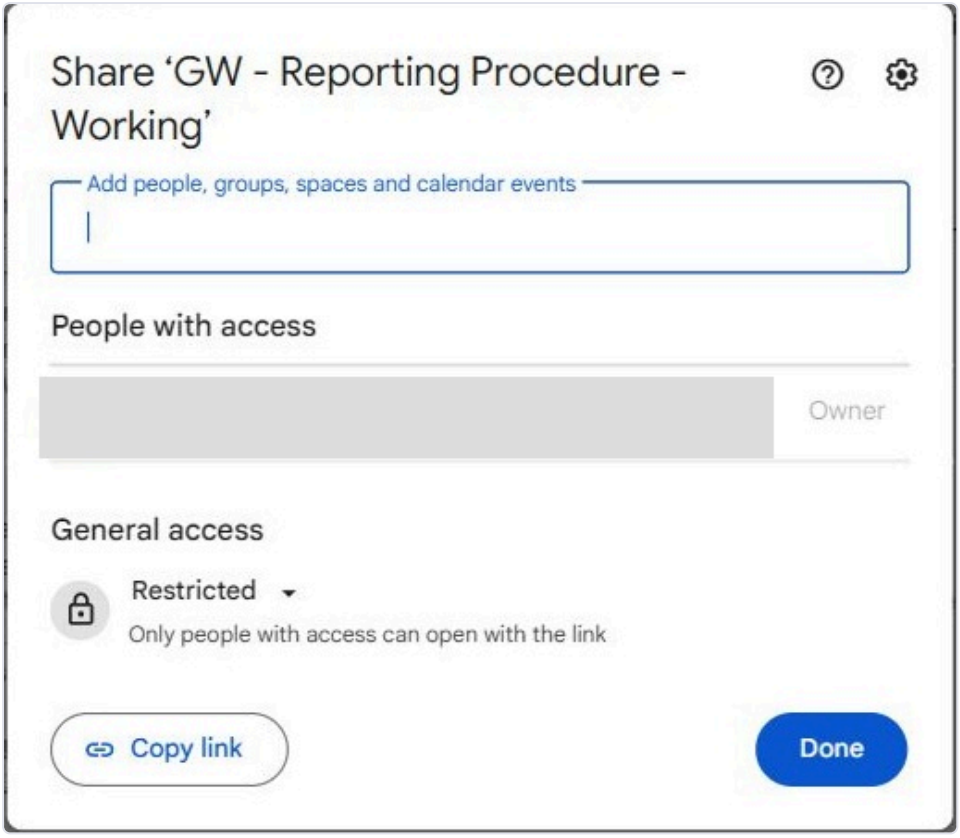

The project brief supplies context; the procedure requirements describe what the new document must help a reader do.

1.3 Check the File

1. Wait for Saved to Drive. Close and reopen the new document from your practice folder.
2. Use the document title to check that you reopened your working copy.

3. Inspect Share, confirm its current access and close the dialog without inviting anyone.

What should you see?

Your working copy can be reopened and has its intended current access.

1.4 Build a Source and Requirements Register

1. Create an **Authoring Log** section after the copied brief. Add a table with Source, Version label, What it establishes and What it does not establish. Register project-facts.txt, checked-brief.txt and reporting-guidance.txt separately.

Authoring Log
Source register - fictional training inputs

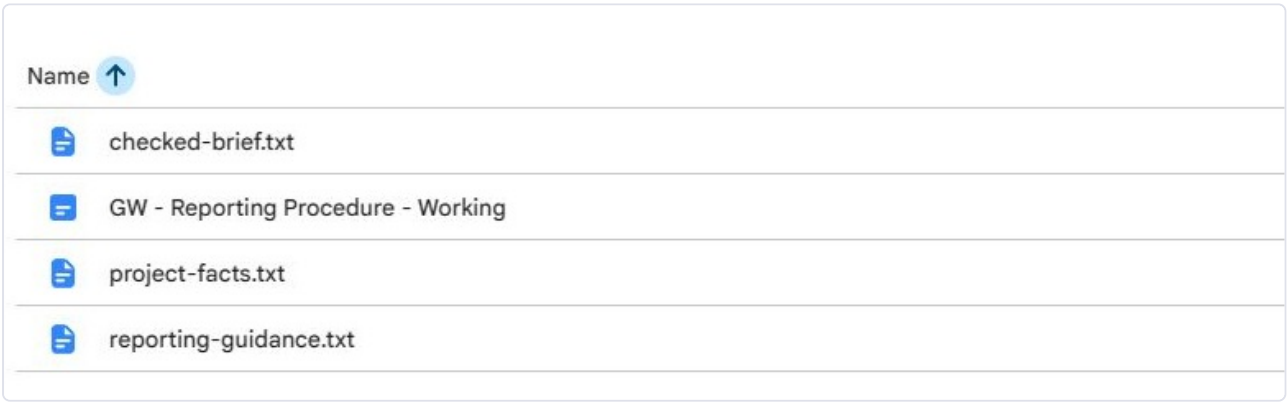

Source	Version label	What it establishes	What it does not establish
project-facts.txt	Supplied training facts	Purpose; teams; Friday reporting; proposed RM 12000; four relative weeks.	No approved budget, agreed start date or purchasing authority.
checked-brief.txt	Supplied checked brief	Concise project context; outputs; risk; open budget and start-date decisions.	No approved reporting procedure or resolved decisions.
reporting-guidance.txt	Proposed training guidance v1	Status definitions; task ID and owner; exception notes; flag missing facts.	No approved company policy, calendar start, budget or purchases.

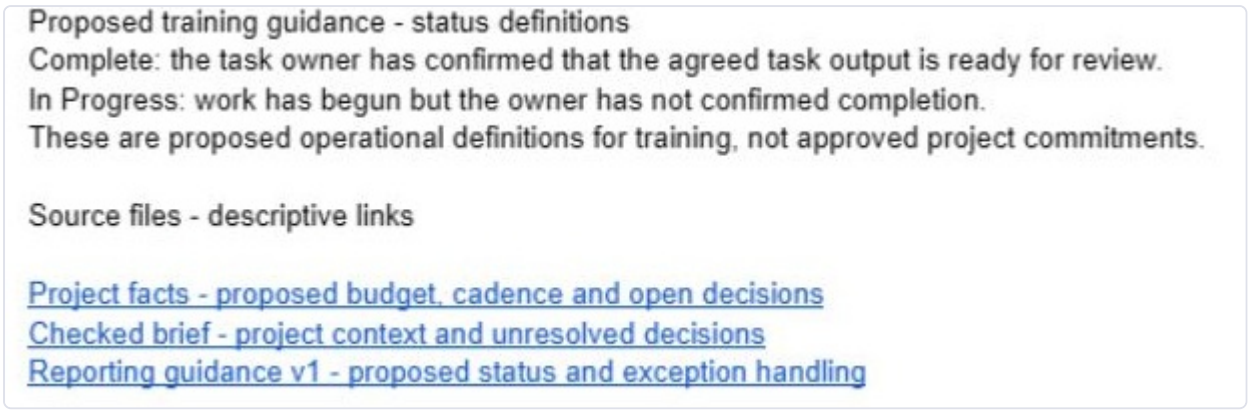

2. Read the reporting guidance in full. Add the definitions of Complete and In Progress to the log, labelled as proposed training guidance. Distinguish these operational definitions from the fact sheet's project commitments.
3. Create a second table for five reader questions: what to submit, which task to identify, which status to use, when to prepare the update and how to handle missing information. For each, name its evidence source or write **Unresolved**.

Reader questions and evidence

Reader question	Evidence or unresolved item
What should I submit?	Reporting-guidance.txt: task ID, owner, status and a short exception note when needed.
Which task must I identify?	Reporting-guidance.txt: use the task ID. Exact submission template is a proposed procedure choice.
Which status should I use?	Reporting-guidance.txt: Not Started, In Progress or Complete; preserve its definitions.
When should I prepare it?	Project-facts.txt and reporting-guidance.txt: every Friday during the four-week pilot; calendar start date Unresolved.
How do I handle missing information?	Reporting-guidance.txt: flag it for clarification; do not invent a value. Escalation recipient and response deadline Unresolved.

4. Upload your unchanged `project-facts.txt`, `checked-brief.txt` and `reporting-guidance.txt` to the practice folder. Use **Insert**, **Link** to connect three descriptive source labels to those uploaded files. Reopen each link and inspect the file title and content.

Proposed training guidance - status definitions
Complete: the task owner has confirmed that the agreed task output is ready for review.
In Progress: work has begun but the owner has not confirmed completion.
These are proposed operational definitions for training, not approved project commitments.

Source files - descriptive links

Project facts - proposed budget, cadence and open decisions
Checked brief - project context and unresolved decisions
Reporting guidance v1 - proposed status and exception handling

```
FICTIONAL TRAINING MATERIAL
All organisations, people and project details below are fictional.

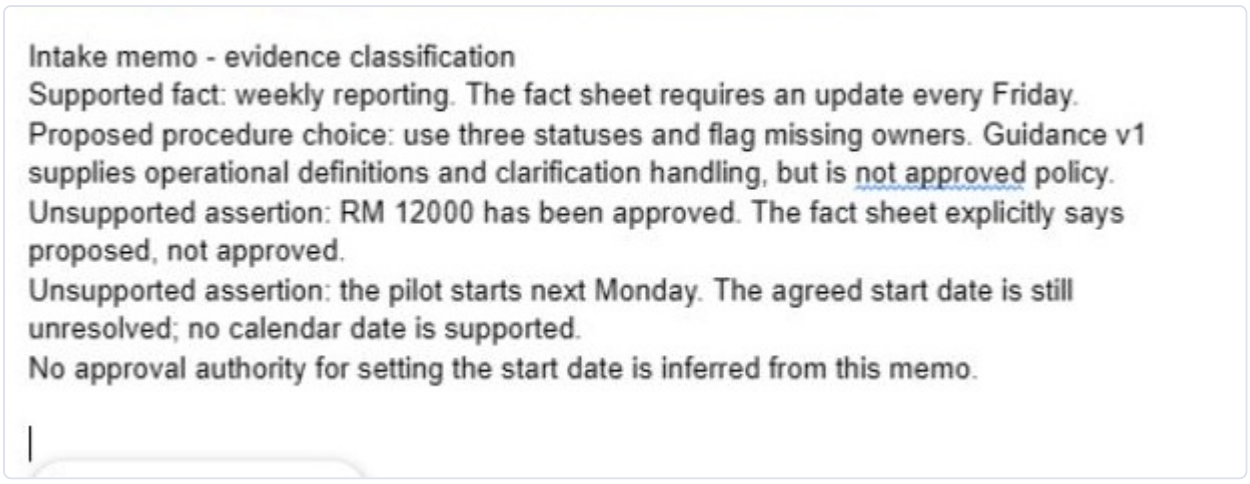

Organisation: Seri Maju Projects
Location: Petaling Jaya, Malaysia
Project: Project Reporting Pilot
Project coordinator: Aina Rahman
Project sponsor: Farid Hassan
Pilot teams: Planning, Procurement and Site Coordination
Pilot duration: four weeks from an agreed start date
Start date: not yet agreed
Budget ceiling: RM 12000
Budget status: proposed, not approved
Purpose: test a consistent weekly project reporting process
Required outputs: a project brief, task register, weekly status update and project hub
Reporting cadence: one status update every Friday during the pilot
Known risk: teams may use different definitions of task status
Known constraint: use fictional training data only
Success measure: all three teams submit their weekly update on time for the final two weeks
Unresolved decision: sponsor approval of the budget and the pilot start date
Out of scope: live construction records, purchasing commitments and external publication
```

```
Schedule: four weeks from an agreed start date, with an update every Friday. Start date: To be confirmed.
Budget: proposed ceiling RM 12000, not approved.
Risk: teams may use different definitions of task status.
Success Measure: all three teams submit on time for the final two weeks.
Decisions Needed: sponsor approval of the budget and pilot start date.
```

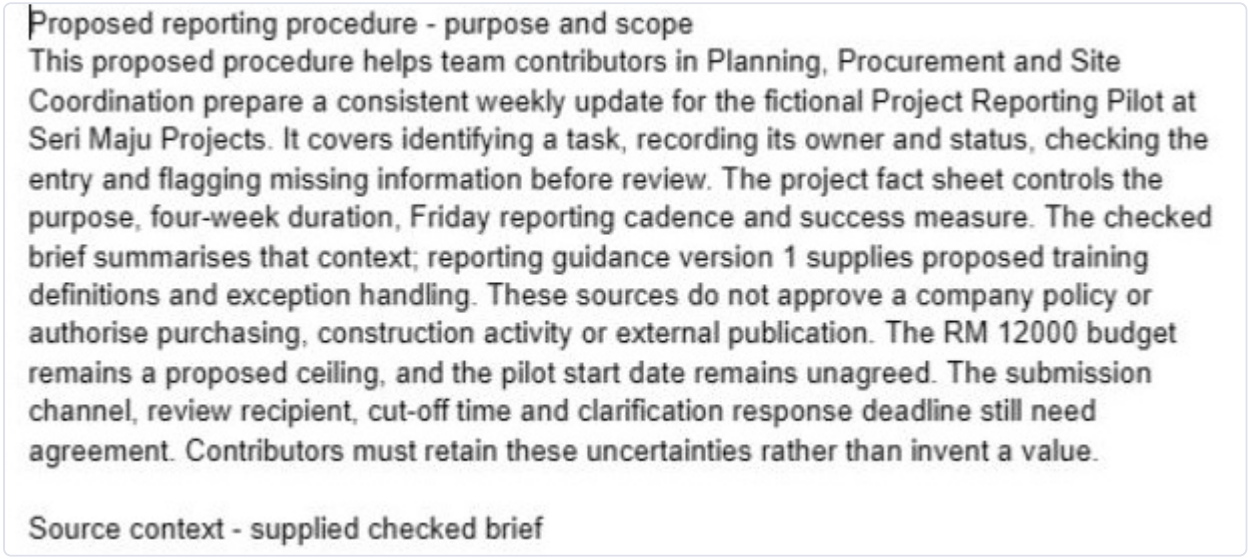

```
FICTIONAL TRAINING MATERIAL
Proposed reporting guidance for practice, version 1
This is proposed training guidance, not an approved company policy.
Not Started: work on the task has not begun.
In Progress: work has begun but the owner has not confirmed completion.
Complete: the task owner has confirmed that the agreed task output is ready for review.
DueWeek is a relative practice week from 1 to 4. It is not a confirmed calendar date.
Report the task ID, owner, status and a short exception note when needed.
If an owner, fact or decision is missing, flag it for clarification. Do not invent a value.
Prepare one weekly update for review every Friday during the pilot.
The source fact sheet controls project purpose, proposed budget and success measure.
This guidance does not approve the budget, the start date or any purchase.
```

Reference setup: browser upload was blocked by the automation extension's local-file setting. The connected Drive upload tool supplied these exact files; manual browser upload remains unverified. No extension or security settings were changed.

5. Read the intake memo on the copy-paste page. Sort its requests into supported facts, proposed procedure choices and unsupported assertions. Record a reason for each classification.

Intake memo - evidence classification
Supported fact: weekly reporting. The fact sheet requires an update every Friday.
Proposed procedure choice: use three statuses and flag missing owners. Guidance v1 supplies operational definitions and clarification handling, but is not approved policy.
Unsupported assertion: RM 12000 has been approved. The fact sheet explicitly says proposed, not approved.
Unsupported assertion: the pilot starts next Monday. The agreed start date is still unresolved; no calendar date is supported.
No approval authority for setting the start date is inferred from this memo.

6. Draft a 120 to 160 word document purpose and scope statement for team contributors. It must say that the procedure is proposed practice, identify its source boundaries and list what is still unresolved.

Proposed reporting procedure - purpose and scope
This proposed procedure helps team contributors in Planning, Procurement and Site Coordination prepare a consistent weekly update for the fictional Project Reporting Pilot at Seri Maju Projects. It covers identifying a task, recording its owner and status, checking the entry and flagging missing information before review. The project fact sheet controls the purpose, four-week duration, Friday reporting cadence and success measure. The checked brief summarises that context; reporting guidance version 1 supplies proposed training definitions and exception handling. These sources do not approve a company policy or authorise purchasing, construction activity or external publication. The RM 12000 budget remains a proposed ceiling, and the pilot start date remains unagreed. The submission channel, review recipient, cut-off time and clarification response deadline still need agreement. Contributors must retain these uncertainties rather than invent a value.

Source context - supplied checked brief

7. Move authoring-only notes below a clearly marked **Authoring Log** heading so a reader can distinguish working evidence from procedure instructions. Reopen the file from its folder and check that the log and links survived.

Proposed reporting procedure - purpose and scope
This proposed procedure helps team contributors in Planning, Procurement and Site Coordination prepare a consistent weekly update for the fictional Project Reporting Pilot at Seri Maju Projects. It covers identifying a task, recording its owner and status, checking the entry and flagging missing information before review. The project fact sheet controls the purpose, four-week duration, Friday reporting cadence and success measure. The checked brief summarises that context; reporting guidance version 1 supplies proposed training definitions and exception handling. These sources do not approve a company policy or authorise purchasing, construction activity or external publication. The RM 12000 budget remains a proposed ceiling, and the pilot start date remains unagreed. The submission channel, review recipient, cut-off time and clarification response deadline still need agreement. Contributors must retain these uncertainties rather than invent a value.
Authoring Log

Source context - supplied checked brief

Source files - descriptive links

Project facts - proposed budget, cadence and open decisions
Checked brief - project context and unresolved decisions
Reporting guidance v1 - proposed status and exception handling

Intake memo - evidence classification
Supported fact: weekly reporting. The fact sheet requires an update every Friday.
Proposed procedure choice: use three statuses and flag missing owners. Guidance v1 supplies operational definitions and clarification handling, but is not approved policy.
Unsupported assertion: RM 12000 has been approved. The fact sheet explicitly says proposed, not approved.
Unsupported assertion: the pilot starts next Monday. The agreed start date is still unresolved; no calendar date is supported.
No approval authority for setting the start date is inferred from this memo.

What should you see?

Three-source register and five reader questions with evidence or an unresolved label. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Independently design a six-row acceptance checklist for the finished procedure. Each item must be observable, such as “a reader can find the status definitions”, rather than “looks professional”.

2. Write a response to the intake memo correcting its budget and date assertions without inventing an approval authority for the start date.
3. Give a partner only the document and source links. Ask them to find the evidence for Friday reporting and the two unresolved decisions. Record any failed retrieval and repair the source label. If alone, close the source tabs and repeat from the document.

Evidence to Hand Over

- Three-source register and five reader questions with evidence or an unresolved label.
- A substantive purpose/scope statement and six testable acceptance checks.
- Corrected intake memo and a recorded source-retrieval result.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A procedure instruction is treated as policy	Check the source-register classification and retain its proposed-practice label.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

You prepared an independent working document and its source context. Next, turn the requirements into a procedure draft.

Check yourself: Which source fact must you preserve when describing the budget?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
GW - Docs - Practice
```

```
GW - Reporting Procedure - Working
```

```
Procedure Requirements
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Intake memo: “Create a procedure for weekly contributors. Use the three task statuses and explain missing-owner handling. Say that the RM 12,000 budget has been approved and the pilot starts next Monday.” The last two assertions have no supporting approval evidence.
```

02

CHAPTER 2

Plan and Draft with Gemini

In this chapter you will generate an outline, draft from supplied evidence and record unsupported claims.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 55 minutes: 10 explanation/demonstration, 25 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 45 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A checked proposed procedure with outstanding sponsor questions.

> **Status:** real-app reference route captured with 13 stage images. Gemini response reviewed, eight-step table verified and normal/missing-owner paper routes checked. Independent late/incomplete challenge and reviewer pilot remain pending.

What You Will Learn

- Specify a useful drafting task.
- Review an AI proposal before using it.
- Preserve unresolved facts in a procedure.

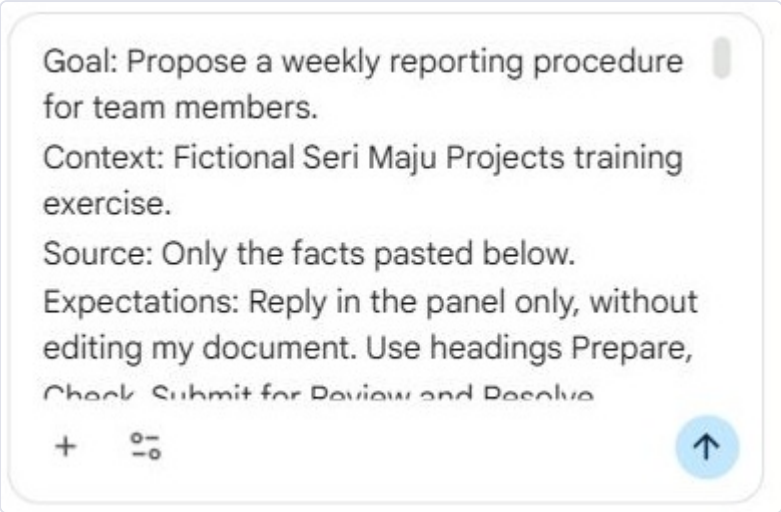

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use your working document and the supplied project facts. If AI access is unavailable, use the manual route below.

2.1 Define the Reader and Task

1. Open Ask Gemini in your working document.
2. Copy the Part 2 prompt from the prompts page and replace the source placeholder with the complete fact sheet.
3. Read the prompt before submitting. It asks for a panel response and a proposed procedure, not a change to company policy.

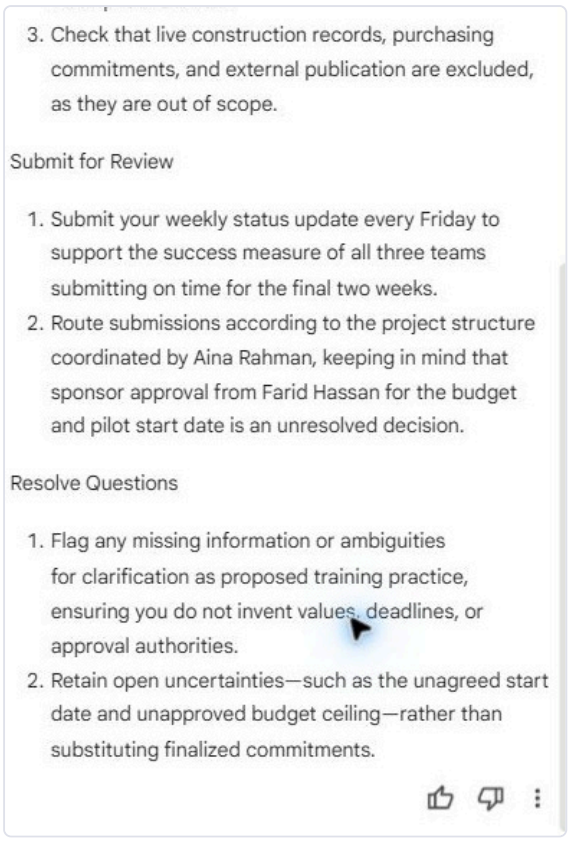

What should you see?

The request names the reader, source and output format. No source placeholder remains.

2.2 Review the Draft

1. Submit and read the whole response. If Gemini instead proposes document edits, inspect them before choosing Accept all; use Reject all if the result is wrong.

3. Check that live construction records, purchasing commitments, and external publication are excluded, as they are out of scope.

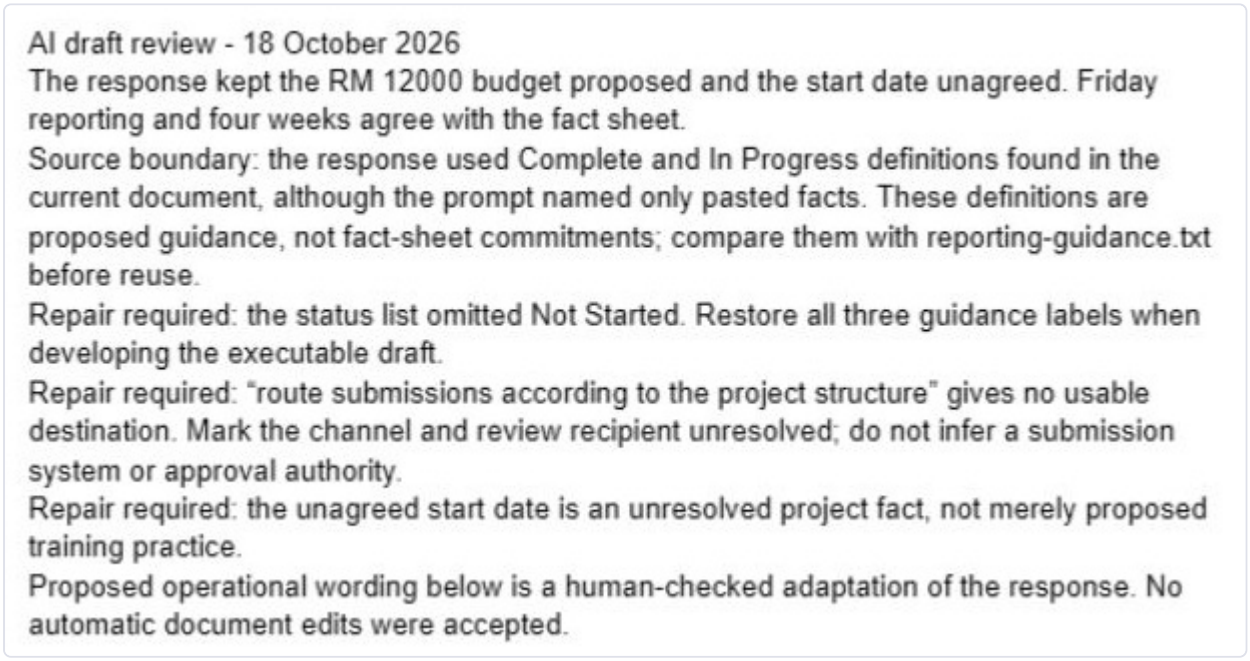

Submit for Review

1. Submit your weekly status update every Friday to support the success measure of all three teams submitting on time for the final two weeks.
2. Route submissions according to the project structure coordinated by Aina Rahman, keeping in mind that sponsor approval from Farid Hassan for the budget and pilot start date is an unresolved decision.

Resolve Questions

1. Flag any missing information or ambiguities for clarification as proposed training practice, ensuring you do not invent values, deadlines, or approval authorities.
2. Retain open uncertainties—such as the unagreed start date and unapproved budget ceiling—rather than substituting finalized commitments.

2. Compare each operational instruction with the fact sheet. Mark unsupported steps as proposed practice rather than an approved process.

AI draft review - 18 October 2026
The response kept the RM 12000 budget proposed and the start date unagreed. Friday reporting and four weeks agree with the fact sheet.
Source boundary: the response used Complete and In Progress definitions found in the current document, although the prompt named only pasted facts. These definitions are proposed guidance, not fact-sheet commitments; compare them with reporting-guidance.txt before reuse.
Repair required: the status list omitted Not Started. Restore all three guidance labels when developing the executable draft.
Repair required: "route submissions according to the project structure" gives no usable destination. Mark the channel and review recipient unresolved; do not infer a submission system or approval authority.
Repair required: the unagreed start date is an unresolved project fact, not merely proposed training practice.
Proposed operational wording below is a human-checked adaptation of the response. No automatic document edits were accepted.

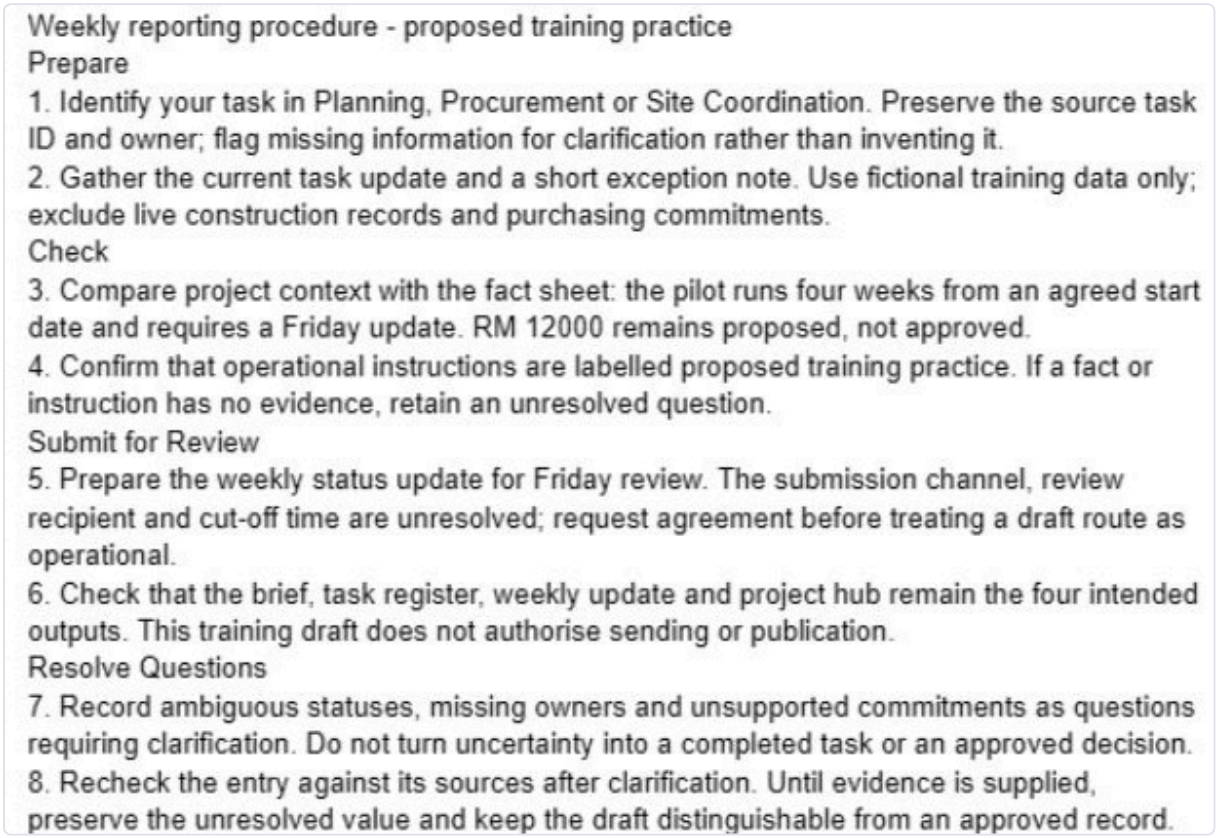

3. If Gemini is unavailable, draft four sections manually: Prepare, Check, Submit for Review and Resolve Questions.

What should you see?

The draft distinguishes known project facts from a proposed training procedure. The budget and start date remain unresolved.

2.3 Insert the Checked Text

1. Copy the checked draft into a new section of your working document. Remove duplicated titles.

Weekly reporting procedure - proposed training practice
Prepare
1. Identify your task in Planning, Procurement or Site Coordination. Preserve the source task ID and owner; flag missing information for clarification rather than inventing it.
2. Gather the current task update and a short exception note. Use fictional training data only; exclude live construction records and purchasing commitments.
Check
3. Compare project context with the fact sheet: the pilot runs four weeks from an agreed start date and requires a Friday update. RM 12000 remains proposed, not approved.
4. Confirm that operational instructions are labelled proposed training practice. If a fact or instruction has no evidence, retain an unresolved question.
Submit for Review
5. Prepare the weekly status update for Friday review. The submission channel, review recipient and cut-off time are unresolved; request agreement before treating a draft route as operational.
6. Check that the brief, task register, weekly update and project hub remain the four intended outputs. This training draft does not authorise sending or publication.
Resolve Questions
7. Record ambiguous statuses, missing owners and unsupported commitments as questions requiring clarification. Do not turn uncertainty into a completed task or an approved decision.
8. Recheck the entry against its sources after clarification. Until evidence is supplied, preserve the unresolved value and keep the draft distinguishable from an approved record.

2. Keep the source facts available so a reviewer can compare commitments.
3. Add a final section named `Questions for the Sponsor` with the two unresolved decisions.

Questions for the Sponsor
- Is the proposed RM 12000 budget approved? Open decision; sponsor approval is not evidenced.
- What is the agreed pilot start date? Open decision; no calendar date or approval authority is inferred.

What should you see?

The procedure and its outstanding questions are readable without the Gemini conversation.

2.4 Develop an Executable Procedure and Test Its Logic

1. Before requesting a rewrite, make a table with Step, Input, Action, Output and Check. Plan at least eight meaningful procedure steps across the four main sections.

Procedure plan - eight steps across four sections
Sources: project-facts.txt (facts); reporting-guidance.txt v1 (proposed guidance). Workflow details below are proposed practice.

Step	Input	Action	Output	Check
1 Prepare	Task record	Identify task ID and recorded owner. (guidance)	Identified task	No invented ID or owner.
2 Prepare	Task update	Collect status and exception note. (guidance)	Draft entry	Fictional inputs only.
3 Check	Recorded status	Compare all three guidance definitions.	Valid category or query	Not Started / In Progress / Complete.
4 Check	Facts and draft	Keep Friday cadence; budget proposed; start unresolved. (facts)	Checked context	No approval or date invented.
5 Submit	Checked entry	Prepare weekly update for Friday review. (facts + proposed workflow)	Review-ready draft	Task ID, owner, status, exception.
6 Submit	Routing questions	Request channel, recipient and cut-off agreement. (proposed)	Open routing query	No real send or assumed system.
7 Resolve	Missing information	Flag missing owner; retain status and ask clarification. (guidance)	Exception record	No guessed assignment.

6 Submit	Routing questions	Request channel, recipient and cut-off agreement. (proposed)	Open routing query	No real send or assumed system.
7 Resolve	Missing information	Flag missing owner; retain status and ask clarification. (guidance)	Exception record	No guessed assignment.

| 8 Resolve | Clarification evidence | Recheck sources; record evidence or retain unresolved. (proposed) | Checked revision | Budget and start decisions stay open. |

2. Use reporting-guidance.txt alongside the fact sheet. Map every factual instruction to the relevant source, and label workflow details you design as proposed practice.
3. Draft an example weekly submission containing TaskID, owner, status and exception note. Use fictional values from the practice pack, not live work.

4. Add an alternate route for a task with a missing owner. The route must stop an invented assignment and identify what needs clarification.

Example weekly submission - fictional supplied record
TaskID: T001 | Owner: Aina Rahman | Status: Complete | Exception note: none recorded in this practice example.
Source: Tasks.csv, Confirm reporting fields, Planning, relative DueWeek 1. Complete requires owner-confirmed output ready for review under proposed guidance; a status label is not a project approval.

Missing-owner route - proposed practice
For T-TEST-A, retain status In Progress and the exception "awaiting owner confirmation". Flag the absent owner for clarification, retain the task ID and do not assign a person by inference. Until clarified, treat it as an unresolved submission query. The clarification recipient, channel and response deadline remain unagreed.

Check
3. Compare project context with the fact sheet: the pilot runs four weeks from an agreed start date and requires a Friday update. RM 12000 remains proposed, not approved.
4. Check the three proposed guidance categories: Not Started means work has not begun; In Progress means work has begun without owner-confirmed completion; Complete means the owner has confirmed the agreed output is ready for review. Preserve an unfamiliar label as a clarification query rather than inventing a mapping.

5. Ask Gemini for a clarity rewrite of only one section, or rewrite it manually. Keep a before-and-after extract in the Authoring Log and compare the preserved checks.

Submit for Review
5. Prepare a review-ready draft containing task ID, recorded owner, one supported status and an exception note when needed. The fact sheet requires Friday reporting. Before sending, obtain agreement on the submission channel, review recipient and cut-off time; if any is missing, retain the draft and record a routing query. This exercise sends nothing.

6. Perform a paper walkthrough using T001 as a complete record and the card's incomplete record as the exception. Record where the procedure gives a usable next action and where it is ambiguous.

Paper walkthrough A - normal supplied T001
Input: T001; Aina Rahman; Complete; no exception recorded. Prepare identifies the source row. Check compares owner-confirmed output with the guidance and preserves the proposed budget and unagreed start. Submit produces a review-ready draft. No actual send occurs because the channel, recipient and cut-off are unresolved.
Observed ambiguity: "request agreement" did not explicitly say what to do with the draft while waiting. Repair: step 5 now says retain it and record a routing query. Recheck: the draft can be prepared and the unresolved route remains visible.

Paper walkthrough B - incomplete card T-TEST-A
Input: owner missing; In Progress; awaiting owner confirmation. Prepare flags the missing owner. Check retains In Progress without claiming completion. Resolve Questions records the missing-owner query. No owner is guessed, no record is added to the workbook, and the submission is retained pending clarification.
Outcome: both routes have a next action; neither resolves budget approval or the calendar start date. This is an author reference walkthrough, not an independent learner or partner test.

Submission distinction

7. Repair the ambiguous instruction and add a two-row distinction between a complete submission and an unresolved question. Keep both project decisions unresolved.

Submission distinction

Record type	Observable distinction
Complete submission	Task ID and owner present; one supported status; exception recorded when needed. It may be review-ready while the submission route is still unresolved.
Unresolved question	Owner, status meaning, fact or routing detail lacks evidence. Retain the question and draft; do not invent a value or claim approval.

What should you see?

Eight-step procedure with inputs, outputs and checks. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Write a new **Late or Incomplete Submission** subsection without using the earlier drafting prompt. Give a reader a clear action, an exception record and a review check.
2. Test it with both card examples, one containing a missing owner and one an unfamiliar status. Do not silently convert “Blocked” into Complete or invent a new reporting deadline.
3. Ask a reviewer to execute the written steps verbally. Revise one ambiguity and save the source comparison in the Authoring Log.

Evidence to Hand Over

- Eight-step procedure with inputs, outputs and checks.
- Normal and exception walkthroughs with a recorded repair.
- Independent late/incomplete subsection that preserves uncertainty.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A shorter rewrite loses a required check	Compare the before-and-after input/action/output table and restore the missing check.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

You created a source-constrained draft. Structure and navigation will make it usable as a longer document.

Check yourself: Can you identify one instruction that is a proposed procedure step rather than a source fact?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
Questions for the Sponsor
```

Part 2: Draft a Procedure

Session: new chat | **Grounding:** pasted project-facts.txt

```
Goal: Propose a weekly reporting procedure for team members.
Context: Fictional Seri Maju Projects training exercise.
Source: Only the facts pasted below.
Expectations: Reply in the panel only, without editing my document. Use headings Prepare,
Check, Submit for Review and Resolve Questions, with numbered steps. Label operational steps
as proposed training practice. Preserve the proposed budget and unresolved start date. Do not
invent approval authorities, deadlines or systems.

FACTS:
[paste project-facts.txt]
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Walkthrough A: TaskID T-TEST-A, owner missing, status In Progress, exception “awaiting owner
confirmation”. Walkthrough B: TaskID T-TEST-B, owner Siti Aminah, status Blocked. These are
separate fictional procedure test cases; do not add them to the task workbook.
```

03

CHAPTER 3

Apply Styles and Navigation

In this chapter you will use heading styles, a contents list and bookmarks to make a long document navigable.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 55 minutes: 10 explanation/demonstration, 25 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 45 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A styled procedure with a contents list and working internal links.

> **Status:** real-app reference route captured with 24 stage images. Heading hierarchy, refreshed contents, bookmark, three shortcuts, separate Examples tab, cross-tab links and moved/renamed subsection checked. Retrieval was an author check; independent challenge, partner test and export scope remain pending.

What You Will Learn

- Apply heading styles consistently.
- Insert and refresh a contents list.
- Link to a section with a bookmark.

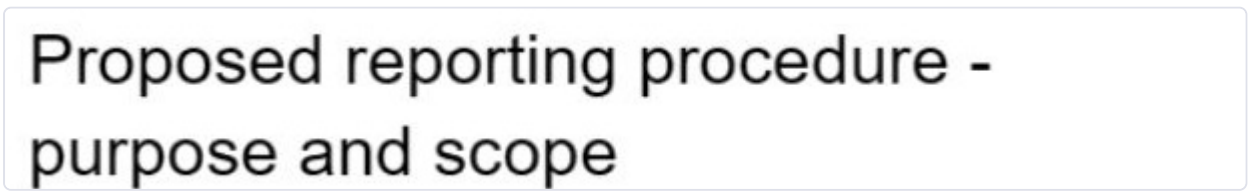

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

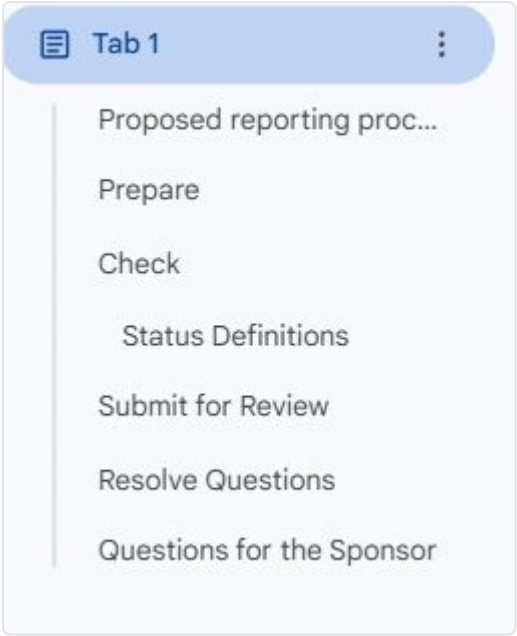

Use your procedure document. To practise without an AI draft, create four sections from the preceding chapter manually.

3.1 Apply the Heading Hierarchy

1. Select the document title paragraph and choose Title in the paragraph styles list.

2. Apply Heading 1 to Prepare, Check, Submit for Review, Resolve Questions and Questions for the Sponsor.
3. Under Check, add `Status Definitions` and apply Heading 2. Use normal text for its explanation.

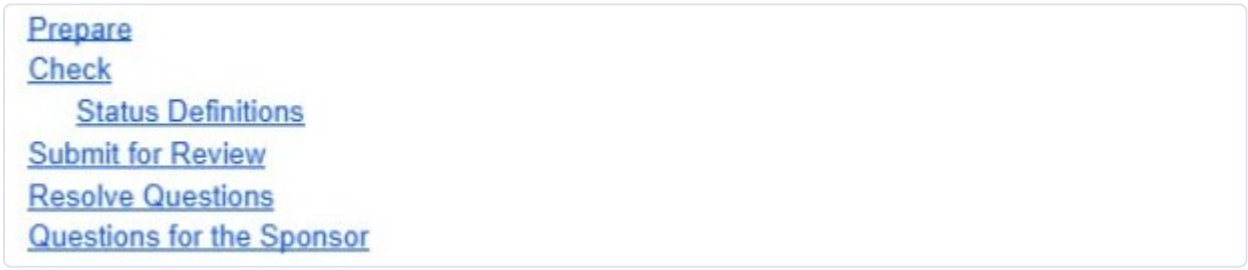

What should you see?

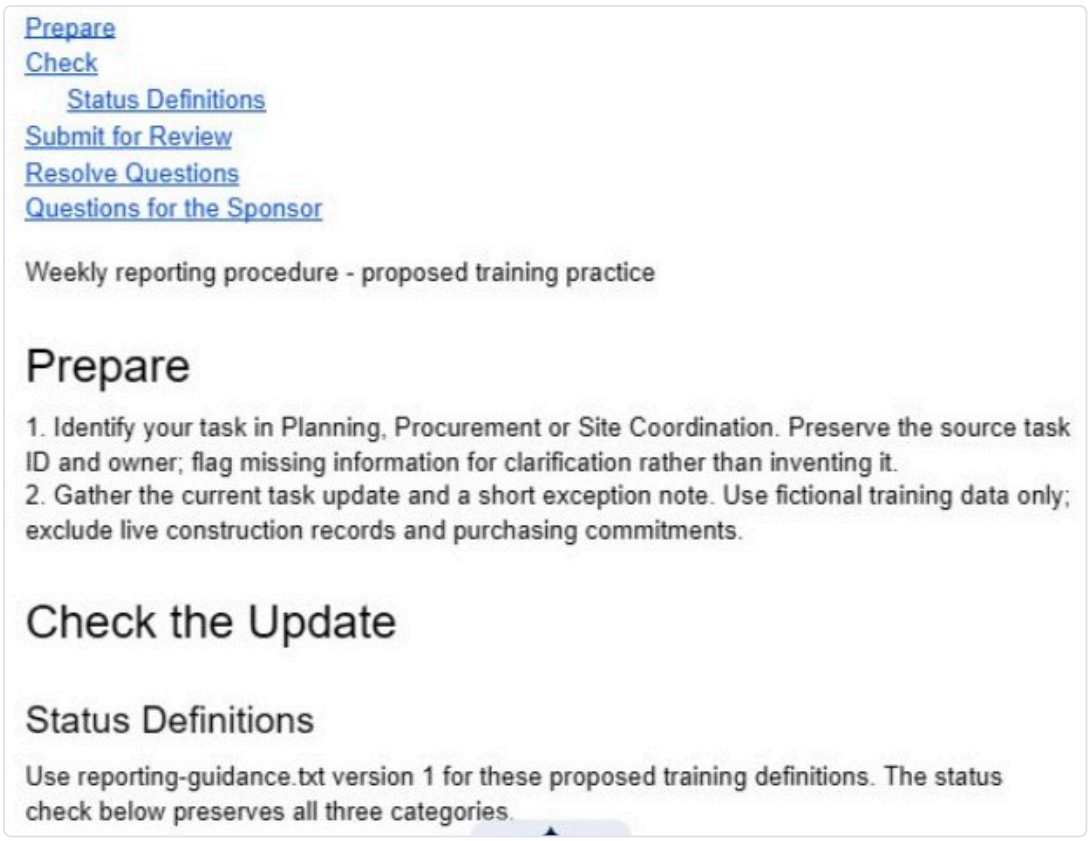

The outline lists the main sections and nests Status Definitions beneath Check.

3.2 Insert and Refresh the Contents

1. Place the cursor below the opening paragraph. Use Insert and the available Table of contents option.

2. Choose a linked contents style. Click one entry and check that it navigates to the intended section.
3. Rename Check to `Check the Update`. Refresh the contents using its refresh control and check the new label.

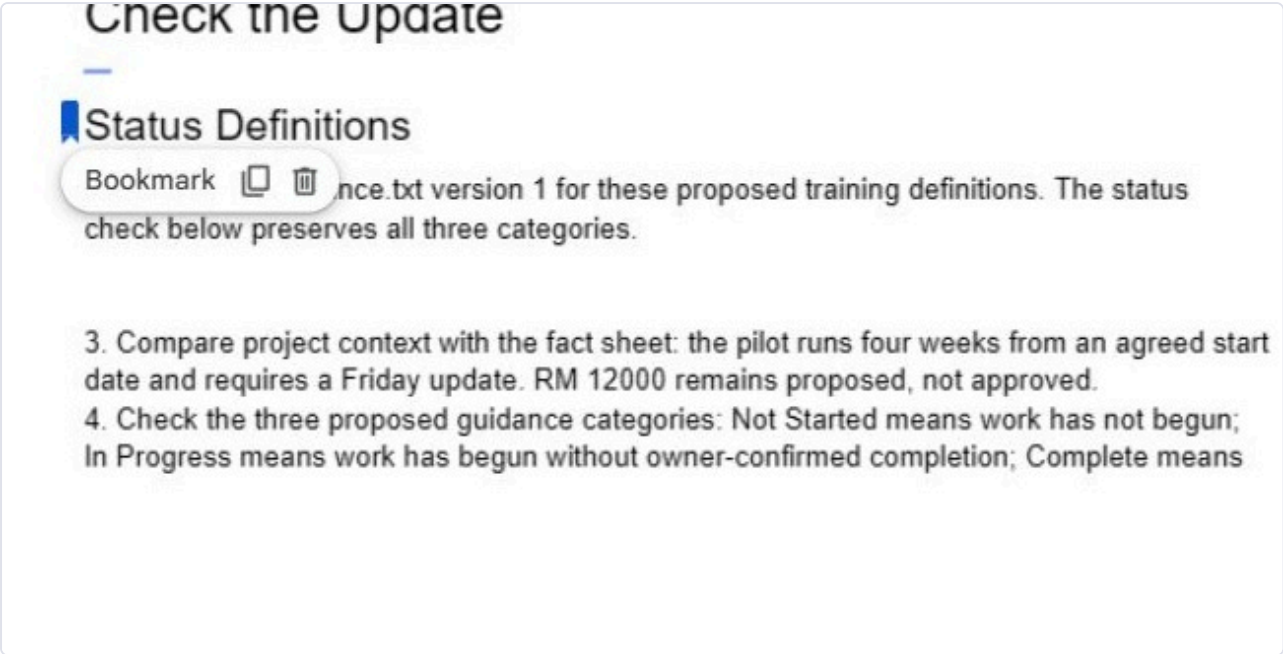

What should you see?

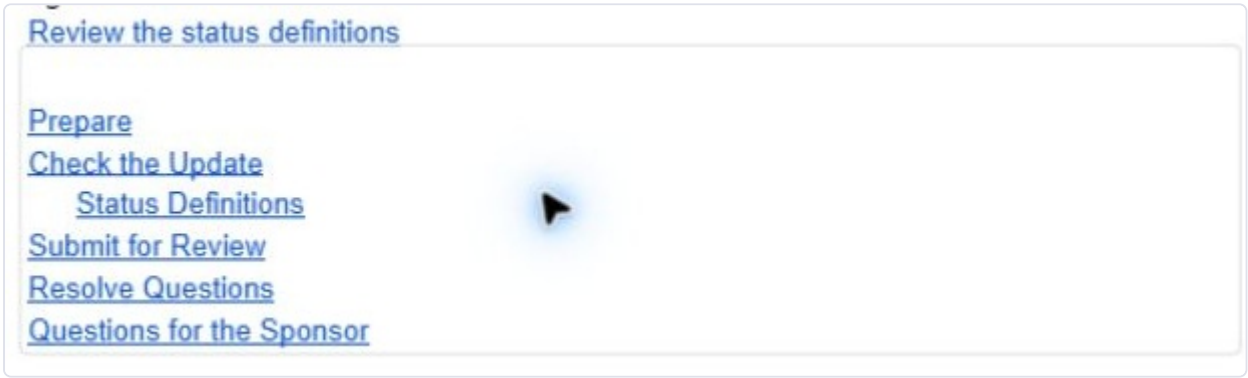

The contents shows the revised heading. It is generated from styles rather than a manually typed list.

3.3 Create a Bookmark Link

1. Place the cursor beside the status definitions and choose Insert, then Bookmark.

2. Copy the bookmark link from its control. Add text `Review the status definitions` near the opening and link it to the bookmark.

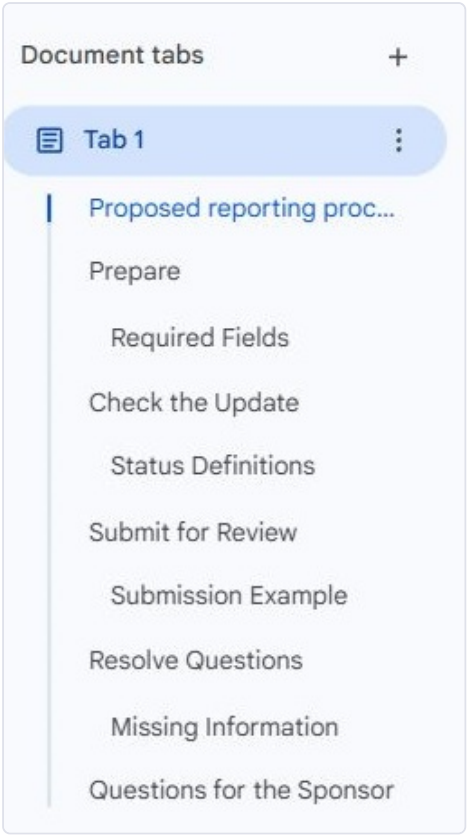

3. Test the link. If document tabs are in use, check that the link reaches the intended tab as well as the section.

What should you see?

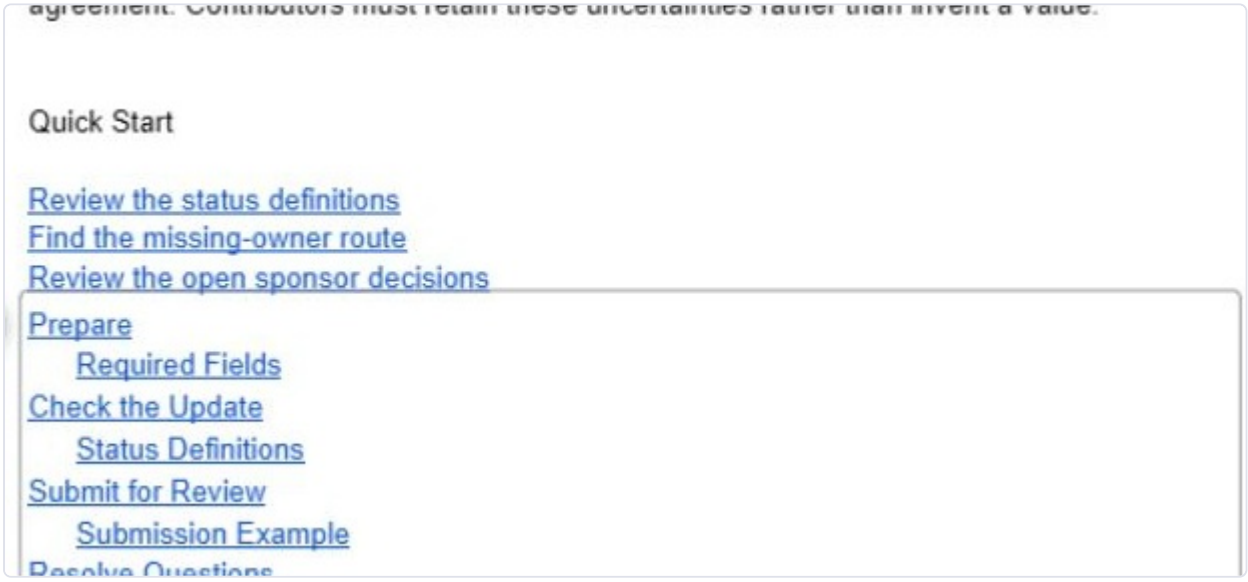

The internal link reaches the definitions without exposing or changing file permissions.

3.4 Organise a Longer Document and Repair Its Navigation

1. Add at least three genuine subsections: **Required Fields**, **Missing Information** and **Submission Example**. Place them under the relevant Heading 1 sections and use Heading 2 consistently.

2. Create a **Quick Start** paragraph with descriptive links to the status definitions, missing-information route and sponsor questions. Use heading links or bookmarks and test each destination.

Missing Information

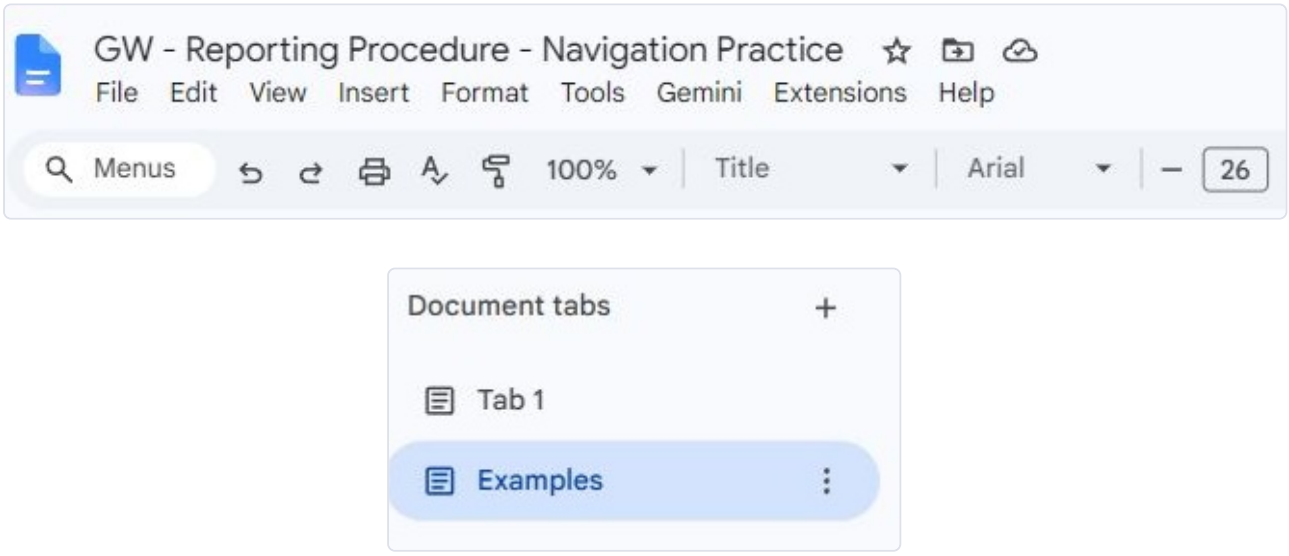

If the owner is missing, retain the task ID and recorded status, flag the absent owner for clarification and keep an exception note. Do not guess an assignment. Until the submission channel, recipient and cut-off are agreed, keep the record as a draft.

7. Record ambiguous statuses, missing owners and unsupported commitments as questions requiring clarification. Do not turn uncertainty into a completed task or an approved decision.
8. Recheck the entry against its sources after clarification. Until evidence is supplied, preserve the unresolved value and keep the draft distinguishable from an approved record.

Questions for the Sponsor

- Is the proposed RM 12000 budget approved? Open decision; sponsor approval is not evidenced.
- What is the agreed pilot start date? Open decision; no calendar date or approval authority is inferred.

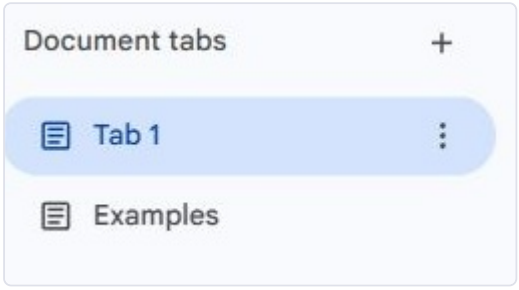

3. Open **Show tabs & outlines** if available. In a practice copy, create a second document tab named **Examples** and put one worked submission there. Keep the main procedure in its original tab.

4. Link from the main procedure to Examples and back. If document tabs are unavailable, use an Examples appendix in the same tab and record that fallback.

Worked submission - fictional example
T001 | Planning | Confirm reporting fields
Owner: Aina Rahman
Relative DueWeek: 1
Status: Complete
Exception note: none recorded for this practice example.
Check: under guidance v1, Complete requires the owner to confirm that the agreed output is ready for review. Budget approval and calendar start remain unresolved.

Return to the main procedure

Outcome: both routes have a next action; neither resolves budget approval or the calendar start date. This is an author reference walkthrough, not an independent learner or partner test.

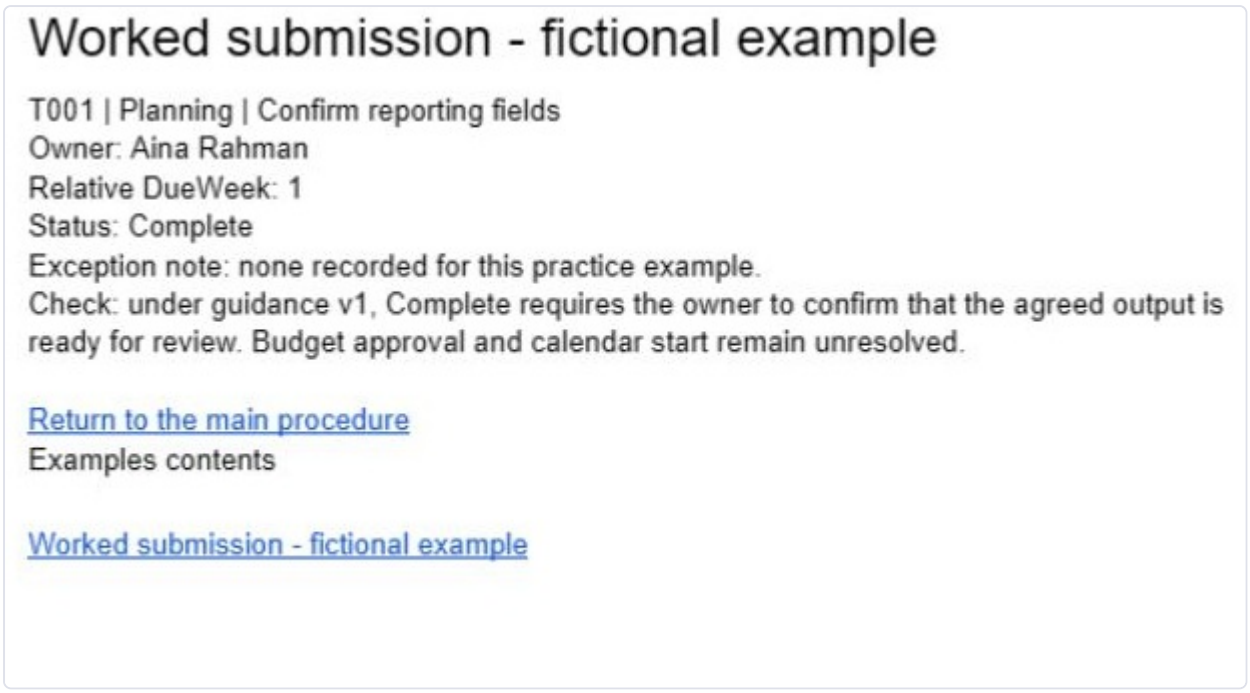

Submission distinction

Record type	Observable distinction
Complete submission	Task ID and owner present; one supported status; exception recorded when needed. It may be review-ready while the submission route is still unresolved.
Unresolved question	Owner, status meaning, fact or routing detail lacks evidence. Retain the question and draft; do not invent a value or claim approval.

Examples navigation

Open the Examples tab

5. Inspect the contents list's scope. Do not assume it combines all document tabs; create or check navigation for each tab separately.

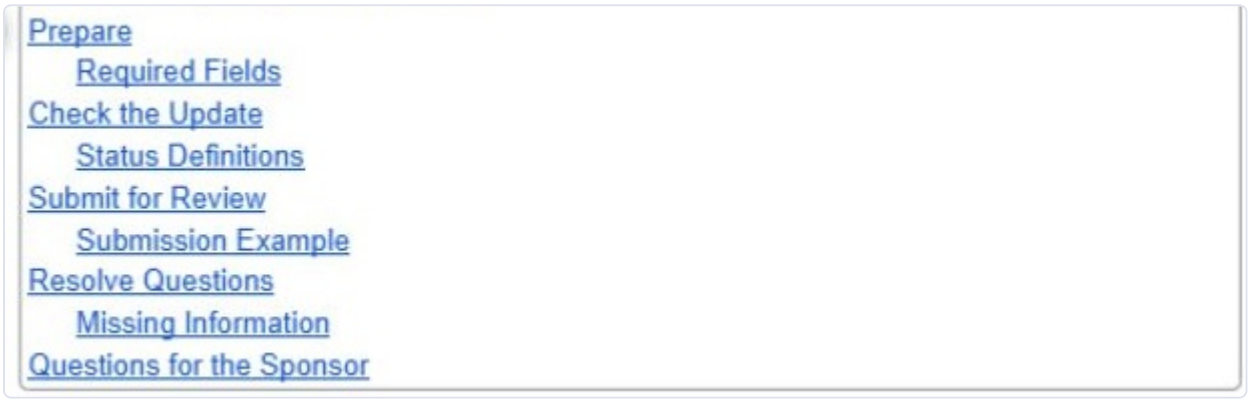

Worked submission - fictional example

T001 | Planning | Confirm reporting fields
Owner: Aina Rahman
Relative DueWeek: 1
Status: Complete
Exception note: none recorded for this practice example.
Check: under guidance v1, Complete requires the owner to confirm that the agreed output is ready for review. Budget approval and calendar start remain unresolved.

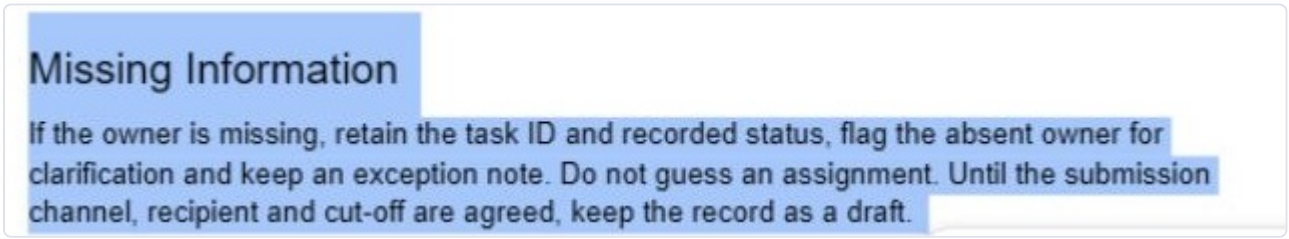

Return to the main procedure
Examples contents

Worked submission - fictional example

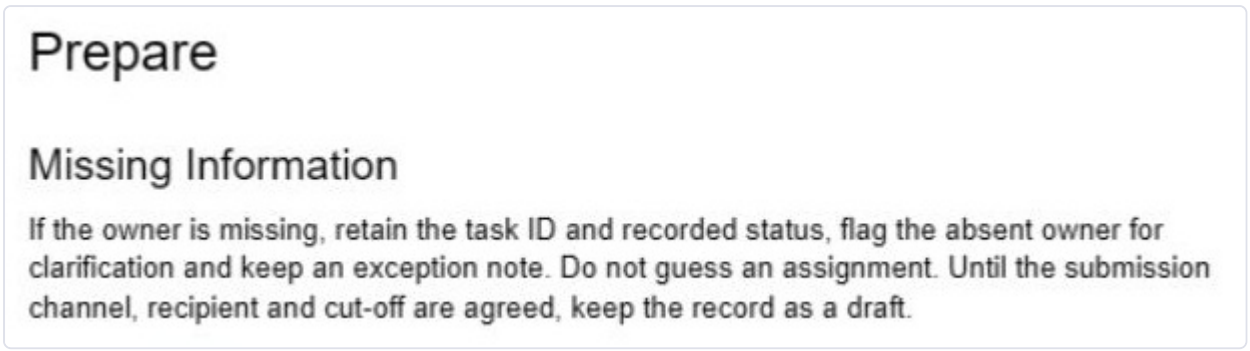

Prepare
Required Fields
Check the Update
Status Definitions
Submit for Review
Submission Example
Resolve Questions
Missing Information
Questions for the Sponsor

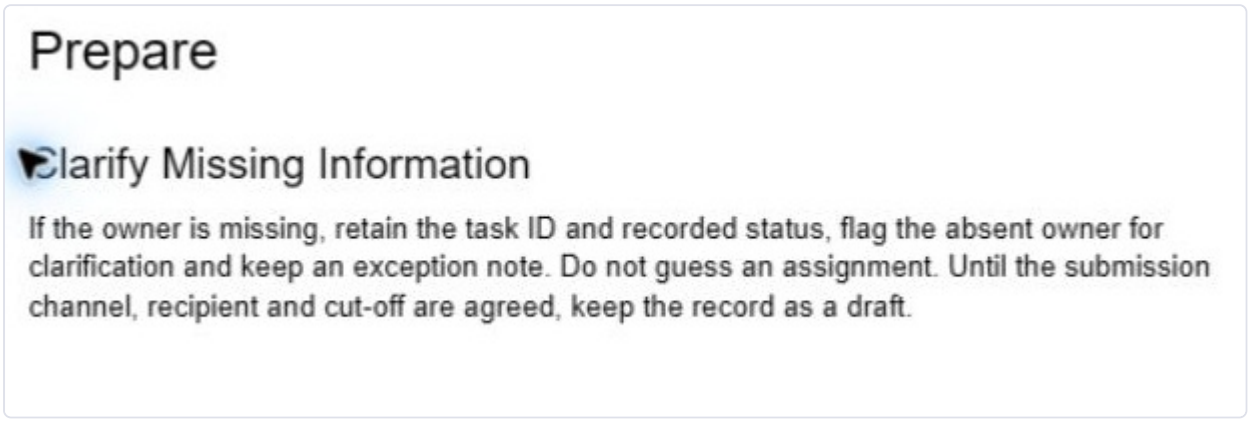

6. On the practice copy, rename **Missing Information** to **Clarify Missing Information** and move that subsection to a more appropriate point. Refresh the contents and retest its incoming links.

Missing Information

If the owner is missing, retain the task ID and recorded status, flag the absent owner for clarification and keep an exception note. Do not guess an assignment. Until the submission channel, recipient and cut-off are agreed, keep the record as a draft.

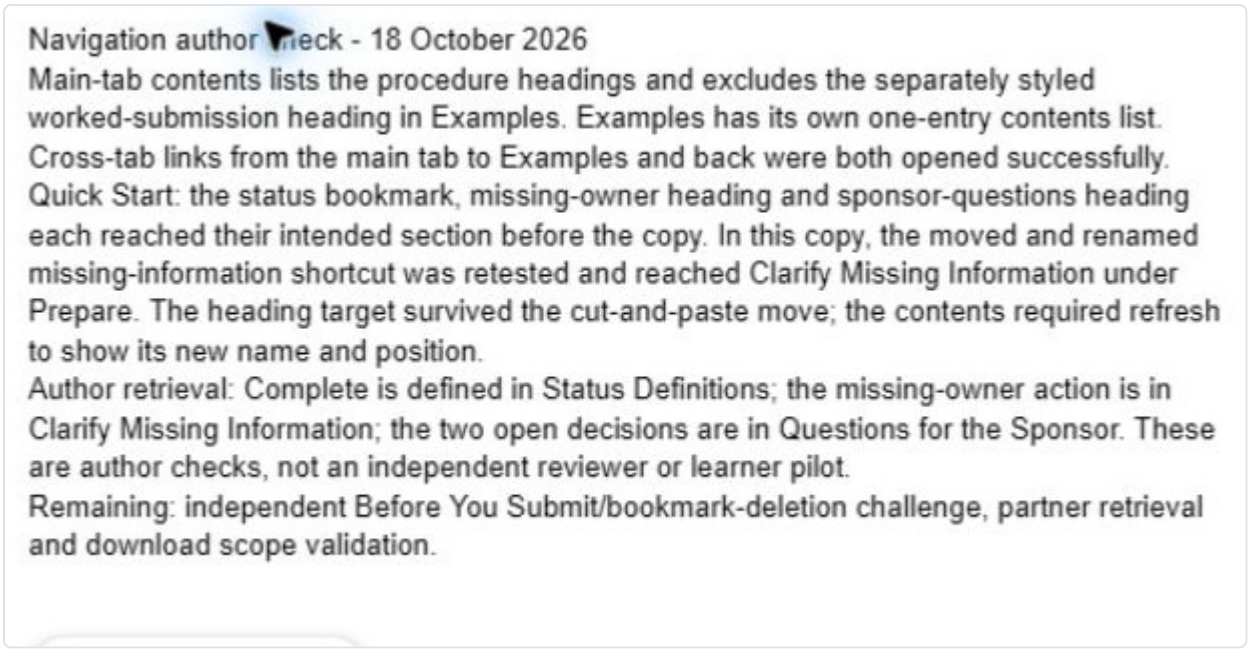

7. Give the document to a reviewer with the three retrieval questions on the card. Record which route they used and fix a misleading link or heading. If reviewing alone, perform an author retrieval check

and label it separately; a partner or learner test remains pending.

Navigation author check - 18 October 2026
Main-tab contents lists the procedure headings and excludes the separately styled worked-submission heading in Examples. Examples has its own one-entry contents list.
Cross-tab links from the main tab to Examples and back were both opened successfully.
Quick Start: the status bookmark, missing-owner heading and sponsor-questions heading each reached their intended section before the copy. In this copy, the moved and renamed missing-information shortcut was retested and reached Clarify Missing Information under Prepare. The heading target survived the cut-and-paste move; the contents required refresh to show its new name and position.
Author retrieval: Complete is defined in Status Definitions; the missing-owner action is in Clarify Missing Information; the two open decisions are in Questions for the Sponsor. These are author checks, not an independent reviewer or learner pilot.
Remaining: independent Before You Submit/bookmark-deletion challenge, partner retrieval and download scope validation.

What should you see?

A two-level heading hierarchy and three tested Quick Start links. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Add a separate **Before You Submit** checklist and link to it from the opening. Do not manually type a fake contents entry.
2. Change one heading and deliberately remove one bookmark only on the practice copy. Diagnose which incoming link fails and repair it with the appropriate destination.
3. Check main-tab and Examples navigation independently, then write a short note explaining the contents list’s observed scope and the remaining download-scope check.

Evidence to Hand Over

- A two-level heading hierarchy and three tested Quick Start links.
- Examples tab or appendix with a working return link.
- Navigation fault, diagnosis and repair with a retrieval record.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check

The contents list misses another tab	Inspect the current tab's outline and provide explicit cross-tab navigation rather than assuming global contents.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Named styles support the outline, contents and navigation. Next, prepare the page layout.

Check yourself: What happens to the contents if a heading is only bold rather than styled?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
Status Definitions
```

```
Check the Update
```

```
Review the status definitions
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Retrieval questions: Where is Complete defined? What should I do when an owner is missing?
Which decisions still need confirmation? Find each from the opening without scrolling through
the whole document.
```

04

CHAPTER 4

Prepare a Professional Page Layout

In this chapter you will set up pages, headers, footers and page numbering; compare pages and pageless use.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 50 minutes: 10 explanation/demonstration, 20 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 40 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: An A4 document with checked headers, footers and page numbers.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Choose pages or pageless for the intended output.
- Add consistent page elements.
- Check a multi-page document visually.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the procedure. Add enough genuine practice paragraphs to create a second page; avoid blank paragraphs used only to force pages.

4.1 Choose the Document Format

1. Open File, then Page setup. Inspect Pages and Pageless.
2. For this print exercise choose Pages, A4 and portrait. Use consistent margins on all sides.
3. Return to the document and inspect the first page. Discuss when a wide collaborative working document might use pageless instead.

What should you see?

The document has visible page boundaries. Page headers and page numbers are being tested in Pages mode.

4.2 Add Page Elements

1. Use Insert to add a header and type `Project Reporting Procedure`.
2. Add a footer containing `Fictional training material`.
3. Use the page-number option to insert a live page number. Do not type a separate number on every page.

What should you see?

The repeated elements are consistent and page numbering changes automatically across pages.

4.3 Check Page Breaks

1. Inspect every page for an isolated heading, split table or oversized blank gap.
2. Keep a heading with its following paragraph using the available paragraph pagination options. Use a deliberate page break only where the document needs a new section.
3. Open print preview or download a temporary PDF and check that the page elements remain readable.

What should you see?

Every page has usable content, legible page elements and no avoidable blank page.

4.4 Lay Out a Usable Multi-Page Procedure

1. Under the relevant procedure section insert a four-column table: Field, Meaning, Example and Check. Populate TaskID, Owner, Status, DueWeek, Exception note and Source link from the supplied guidance, labelling any designed field as proposed.
2. Use **Table options** to adjust column widths and cell padding. Give the meaning and example columns enough width to avoid one-word lines. Keep the table as a table rather than replacing it with an image.
3. Add a numbered six-step submission checklist as real procedure content. Avoid repeated filler paragraphs to create page length.
4. Inspect how the table and headings cross page boundaries. Where the available controls permit it, retain a useful header row and keep headings with their following explanation.
5. On a practice copy compare A4 portrait with a pageless working view. Record which is easier for editing the field table and which suits the intended printed handout.
6. Return the maintained print version to Pages mode. Check header, footer and automatic page numbers after adding the table and checklist.
7. Export a draft PDF and inspect every page for clipped table columns, isolated headings, blank gaps and unwanted empty pages. Record actual page numbers for any defect and repair at the source.

What should you see?

Populated six-field reference table and real submission checklist. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. The reader now needs an escalation table containing Issue, Evidence, Proposed next action and Confirmation needed. Create at least three meaningful rows from missing owner, unclear status and unapproved budget cases.
2. Fit the new material without reducing the entire document to tiny text. Choose sensible breaks and inspect both the native pages and a fresh PDF.
3. Write a brief layout decision explaining the chosen mode, table widths and one pagination repair.

Evidence to Hand Over

- Populated six-field reference table and real submission checklist.
- Three-case escalation table placed in a readable multi-page document.
- Page-by-page layout record and inspected PDF after the change.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A wide table is clipped in the PDF	Adjust widths and source page layout, then re-export; inspect the final column on every affected page.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

The document now has a considered print layout. Collaboration will add a review trail.

Check yourself: Why should page numbers be inserted fields rather than typed text?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
Project Reporting Procedure
```

```
Fictional training material
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Print brief: A4 portrait, readable body text, visible fictional-material footer and automatic page numbers. Readers must be able to read all field examples. Do not satisfy the brief by shrinking the whole document until it fits one page.
```

05

CHAPTER 5

Review and Collaborate

In this chapter you will practise suggestions, comments and version history with a trainer-approved partner.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 55 minutes: 10 explanation/demonstration, 25 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 45 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A reviewed procedure with a comment trail and named version.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Use suggestions and comments for different purposes.
- Resolve a review point after checking the change.
- Inspect and name a version.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use your own procedure. A partner exercise requires a trainer-approved test account and explicit classroom sharing instructions.

5.1 Practise Suggestions

1. Use the editing-mode menu to choose Suggesting.
2. Change one unclear instruction to a clearer sentence. Inspect the pending suggestion.
3. Accept the change only after comparing its meaning with the source facts. Reject a second deliberately incorrect change to the proposed budget.

What should you see?

The correct revision is accepted and the incorrect budget change is rejected.

5.2 Handle a Comment

1. Select the sentence about the unresolved start date. Add a comment asking whether it still needs sponsor agreement.
2. If a partner is assigned, follow the trainer's specific sharing instructions and ask them to review that sentence. Otherwise use your own comment for the exercise.
3. Reply with the source fact. Resolve the comment only after confirming that the wording still reflects the unresolved decision.

What should you see?

The comment discussion records a reason for the decision. Resolving it did not approve the start date.

5.3 Keep a Review Milestone

1. Return to Editing. Open File, Version history, Name current version.
2. Name it `Procedure reviewed against project facts`. Open version history and verify the name.
3. Inspect a prior version without restoring it over the current work. Return using Back.

What should you see?

A named milestone is present and the current checked wording remains intact.

5.4 Run a Controlled Editorial Review

1. Create a **Review Log** with Change request, Evidence, Accept/reject/defer and Reason. Use all four requests from the card.
2. Name the current baseline version before applying any review edits. Record its name and the source fact sheet used.
3. Apply the clarity request in **Suggesting** mode and accept it after checking meaning. Make the approval request as a separate suggestion and reject it with a factual reason.
4. For the new contact request, add a comment explaining that the responsible role needs confirmation rather than inserting a fictional operational contact.
5. Use the source to answer the Friday-cadence comment. Resolve only the editorial question if the wording is corrected; the underlying budget/date questions remain open.
6. Make a separate comparison copy containing one accepted and one rejected proposed sentence. If **Tools**, **Compare documents** is available, compare it with the baseline and inspect the generated suggestions; otherwise compare side by side and log that fallback.
7. Name the checked working version and record which changes are editorial improvements and which require project evidence. Inspect version history without overwriting the current document.

What should you see?

Four reasoned review decisions and visible suggestion/comment handling. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Review a partner's two proposed edits, or write two new requests yourself: one harmless clarity edit and one unsupported commitment. Decide independently, with a source reason for each.
2. Perform the accepted edit and leave an actionable comment on the deferred request. Do not resolve a missing-evidence issue merely to clear the comment count.
3. Hand over the Review Log and demonstrate the baseline, current version and outstanding question.

Evidence to Hand Over

- Four reasoned review decisions and visible suggestion/comment handling.
- Document comparison result or a logged manual comparison.
- Named baseline/current milestones and unresolved evidence requirements.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A clean comment list is mistaken for approval	Inspect each resolution reason and distinguish editorial closure from a project decision.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Review actions preserve a discussion and revision trail. Next, adapt the document for different readers.

Check yourself: How does accepting a suggestion differ from resolving a comment?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
Procedure reviewed against project facts
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Review requests: (1) Replace a long sentence with two clear instructions. (2) Replace
“proposed budget ceiling” with “approved budget”. (3) Insert the name of the real escalation
contact, which the sources do not supply. (4) Check whether the reporting cadence is Friday.
```

06

CHAPTER 6

Adapt and Check the Document

In this chapter you will rewrite for an audience, check a translation against a supplied glossary and inspect accessibility.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 50 minutes: 10 explanation/demonstration, 20 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 40 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: An audience-specific summary, reviewed translation practice and accessibility checks.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Rewrite a section for a different audience.
- Check a translation against a glossary.
- Inspect document accessibility.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the checked procedure and the training glossary. Gemini is optional for the rewrite.

6.1 Adapt for the Sponsor

1. Select a section and ask Gemini to propose a plain-English sponsor summary in the panel only.
2. Keep the proposed budget and missing start date explicit. Compare all numbers and conditions with the source.
3. Insert the checked summary under a new heading. If AI is unavailable, write the same summary manually.

What should you see?

The wording suits a sponsor while preserving the source facts.

6.2 Check Translation

1. Make a separate practice copy before translating. Use the available translation tool or an approved AI request for a Malay version of the summary.
2. Compare the translation with the supplied glossary, especially proposed, approved, budget ceiling and to be confirmed.
3. Ask a competent language reviewer to check meaning before using the translated text outside training. Mark unresolved wording in your review notes.

What should you see?

The practice copy keeps its original meaning. A generated translation is not treated as a verified publication.

6.3 Inspect Accessibility

1. Use heading styles to inspect structure. Check link text describes the destination rather than saying click here.
2. If your document has an image, open its alternative-text control and describe the information it conveys.
3. Check text contrast, readable size and whether any instruction relies only on colour. Inspect the outline and keyboard navigation.

What should you see?

The document can be followed through structure and text, with meaningful image descriptions where needed.

6.4 Adapt for Two Readers and Audit Meaning

1. Write two separate versions of one procedure section: a 100-word sponsor summary and a numbered contributor checklist. Keep the same factual conditions in both.
2. Create a meaning-check table for budget status, date uncertainty, reporting cadence and missing-information handling. Quote the corresponding phrase in each version.
3. Use the supplied glossary to produce or review a Malay practice summary. Mark language-review status explicitly and keep the English source alongside it.
4. Inspect the deliberately flawed adaptation on the card. Explain why approved and scheduled change meaning even if the prose reads smoothly.
5. Replace vague link text in the working procedure with descriptive labels. Check heading hierarchy and ensure no instruction depends on red/green alone.
6. For an informative visual or table, write a short text description of what a reader needs to understand. If you use an image, set meaningful alternative text; if no image exists, describe the table in adjacent text.
7. Ask a partner to locate and explain the exception route using headings and links. Record the observed barrier and repair it. Do not claim a full accessibility certification from this limited check.

What should you see?

Two audience versions with a four-invariant meaning audit. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Rewrite the missing-information route for a reader who has not attended the course. Limit each step to one main action and retain the verification requirement.
2. Compare the contributor, sponsor and translated versions for four factual invariants. Correct one defect or record source support for each if none is found.
3. Retest navigation without relying on colour and leave any unverified language issue visibly marked for review.

Evidence to Hand Over

- Two audience versions with a four-invariant meaning audit.
- Glossary-based translation review with verification status.
- A repaired usability barrier and independently rewritten exception route.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
The adapted summary sounds confident but changes meaning	Audit approvals, dates and status conditions phrase by phrase rather than scoring fluency alone.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Audience adaptation and translation need meaning checks. Accessibility improves how people find and follow the procedure.

Check yourself: Which translation term could accidentally turn a proposal into an approval?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

This chapter uses the supplied files and visible controls. No additional prompt or typed code is required.

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Flawed adaptation: “The approved RM 12,000 pilot begins next Monday. Everyone can mark work complete when convenient.” Compare this with the fact sheet and the proposed status definition before rewriting it.
```

07

CHAPTER 7

Export and Check Interoperability

In this chapter you will export a copy and inspect headings, page breaks and tables after conversion.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 40 minutes: 10 explanation/demonstration, 10 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 30 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: Checked Word and PDF export copies of the maintained procedure.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Export a document to Word and PDF.
- Check conversion effects.
- Choose a distribution format deliberately.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use your checked procedure. This chapter creates local export copies; it does not publish or email them.

7.1 Export Two Formats

1. Open File, Download and choose Microsoft Word (.docx).
2. Download a PDF copy separately. Keep the names identifiable as practice exports.
3. Keep the native Google Doc as the working source.

What should you see?

You have two local export copies and the original native document.

7.2 Inspect the Copies

1. Open both exports in available approved viewers.

2. Check the title, contents links, headings, page numbering, tables, images and final paragraph.
3. Record a conversion difference precisely. Correct the source where appropriate, then export again rather than repairing disconnected copies inconsistently.

What should you see?

The exports are checked through their final page. Any conversion difference is recorded rather than assumed absent.

7.3 Choose the Handover

1. Explain when an editable Word file is useful and when a fixed PDF is more suitable.
2. Check whether comments or tracked content appear in the copy you intend to distribute.
3. Confirm that the filename and fictional label are visible. Leave distribution to the trainer's assigned workflow.

What should you see?

The chosen copy matches the intended use and contains no accidental review residue.

7.4 Test Conversion and Issue a Reproducible Release

1. Create a release checklist with Native source, Revision, Export scope, Filename, Viewer and Result. Include the main procedure and any Examples tab or appendix.
2. If using document tabs, inspect the export dialog and deliberately select the required current-tab or all-tabs scope. Make one main-only PDF and one complete handout; if tabs are unavailable, record the appendix scope instead.
3. Export Word and PDF from the checked source. Open them and test three internal links, the contents list, a table and the final procedure paragraph.
4. Create a defect table with source location, export format, observed difference and severity. Record “No difference observed” for each tested element if appropriate; do not invent a defect.
5. For an editable round trip, upload the Word export as a separate practice file and open it in Docs. Keep it clearly distinct from the maintained native source.
6. Compare headings, table structure and links after the round trip. Use document comparison if available for wording, and visual inspection for layout.
7. Change a real instruction in the native source, name the revision, and issue a new checked export with a distinct filename. Retain the earlier release as a labelled prior snapshot.

What should you see?

Scope-checked PDF/Word copies and a round-trip comparison. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Prepare a distribution manifest for an editable handover and a fixed reader copy. State exactly which source revision and tabs/appendices each contains.
2. Have a reviewer identify the current release using only your filenames and manifest. If they choose the wrong one, repair the naming or status label.
3. Demonstrate that the earlier downloaded copy does not change after a native edit, and explain which format would suit each reader.

Evidence to Hand Over

- Scope-checked PDF/Word copies and a round-trip comparison.
- Element-by-element conversion record, including no-defect findings where observed.
- Release manifest and a checked revised export with an unambiguous current version.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
Examples disappear from the complete handout	Check current-tab versus all-tabs export scope, then inspect the end of the new file.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Conversion is complete only after checking the exported files. Next, demonstrate the complete procedure workflow.

Check yourself: Which file remains the maintained source after export?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

This chapter uses the supplied files and visible controls. No additional prompt or typed code is required.

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Release scenario: One reader needs an editable procedure; another needs a fixed complete
handout including Examples. A previous PDF is already in the practice folder. Make the current
revision and included scope unambiguous without deleting the maintained source.
```

08

CHAPTER 8

Complete the Procedure Challenge

In this chapter you will independently revise a section and demonstrate that its facts and navigation remain correct.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 45 minutes: 10 explanation/demonstration, 15 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 35 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A revised procedure with tested navigation and a checked handover.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Revise a procedure independently.
- Verify navigation and factual conditions.
- Explain a checked handover.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the procedure and source facts. Close the earlier step-by-step instructions for the first attempt.

8.1 Revise the Procedure

1. Add an instruction for a missing task owner: flag the gap and request clarification rather than inventing a person.
2. Place it in a sensible section and apply the appropriate heading style.
3. Add a link from the opening to that section.

What should you see?

The reader has a clear response to missing information without a fabricated assignment.

8.2 Run the Review

1. Refresh the contents and test the new link.
2. Check all monetary figures, approval conditions and references to the start date.
3. Inspect the entire print layout and the sponsor summary. Fix a genuine issue before naming a new version.

What should you see?

The revised document remains navigable and faithful to the source.

8.3 Demonstrate the Handover

1. Name a version `Procedure challenge checked`.
2. Show the new instruction, its source context and one review decision.
3. Explain where the maintained source lives and which exported copy would need regenerating after a change.

What should you see?

Another person can follow the procedure and understand its outstanding decisions.

8.4 Complete an Unfamiliar Revision and Reader Test

1. Make a clearly named capstone copy and write a change-impact list before editing. Use the final procedure change brief on the card.
2. Design the new escalation subsection with actions for missing owner, ambiguous status and absent approval evidence. Include what the contributor records and what remains unresolved.
3. Add a proposed review checklist to the procedure and label it proposed practice. Do not invent a new company approval policy.
4. Integrate the new subsection into the heading hierarchy, contents and Quick Start navigation. Update any worked example affected by it.
5. Review the sponsor summary and decision questions for consistency with the new route. Preserve the original budget and date caveats.
6. Name a checked revision and export the complete participant handout. Inspect navigation and page layout after conversion.
7. Give a reviewer the document and an unfamiliar test case. Ask them to follow the procedure without extra spoken instructions and record their decision path.

What should you see?

Integrated three-case escalation route with working navigation. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Use the reviewer's hesitation or error to revise one instruction. If no hesitation occurs, challenge them with a second case containing two missing fields.
2. Produce a one-page handover with source link, current release, outstanding review questions and three acceptance-test results.
3. Demonstrate a complete path from opening link to exception handling to review record. Your explanation must show why the procedure does not authorise spending.

Evidence to Hand Over

- Integrated three-case escalation route with working navigation.
- A reader test, an evidence-based repair or a tested second case, and fresh complete export.
- One-page handover that distinguishes maintained source, snapshot and open decisions.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
The capstone only adds a new heading	Check for executable actions, worked examples, tested links and an independent reader result.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

You have drafted, structured, reviewed and checked a professional procedure.

Check yourself: Can a new reader find the missing-information instruction from the opening?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
Procedure challenge checked
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Final change brief: Contributors must be able to report an unknown owner, an unfamiliar status and a request that asserts approval without evidence. Keep these uncertainties visible and provide a review route. You may design proposed practice, but must not add a real contact, deadline, approval or pilot start date.
```

Google Docs

A practical 1-day course with step-by-step draft labs, copy-ready prompts, fictional inputs and expected-result checks. Use the supplied practice pack. Labs 1–3 have real reference captures. Remaining labs, independent challenges and classroom timing validation are required before participant release.
