Resources: Use the practice files supplied with this review package.

Google, Google Workspace, Gmail, Google Drive, Google Docs, Google Sheets, Google Slides, Google Sites, Gemini and NotebookLM are names associated with Google. This independent training guide is not published or endorsed by Google.

Screenshots show the product at the time of writing. Google updates its apps often, so labels, availability and layouts in your account may differ. This review draft still requires full lab validation.

About the author

Asraf is a Microsoft Certified Trainer and HRD Corp-certified IT trainer based in Malaysia. He has been teaching working professionals since 2008, helping teams at banks, pharmaceutical companies, construction firms, and retailers get real work done with Microsoft 365, Power Platform, Excel, Google Workspace, and, more recently, AI tools like Copilot.

He holds a Bachelor of Information Technology (Multimedia) from the University of Malaya, along with Microsoft certifications in Power BI (PL-300) and AI for business (AB-730). Outside the classroom he writes his own automation tools in Python and Node.js, mostly to save himself from doing the same task twice.

He runs his training practice solo, which means he has personally felt every inefficiency this book tries to fix.

INTRODUCTION

Before you begin

This review book accompanies Google Slides. Work through its chapters in order and keep the original practice inputs unchanged. The same notes and prompts also appear in the local course website.

Current Status

All chapters in this book are written drafts. Most have not yet been executed end to end in the application. The masterclass's reference brief chapter has a tested core path with a recorded recovery prompt; that does not validate the other exercises. Treat VERIFY notes and draft notices as production work still to complete.

What You Need

Use a desktop browser and the Google account approved for the class. Confirm app and AI access beforehand. Edition, administrator controls and language can affect availability.

Download the supplied fictional practice pack. No real client or personnel record is needed. Dataset week fields are relative practice weeks, not an agreed pilot start date.

How to Use the Exercises

Follow the numbered steps, attempt the output and then open the expected-result box. AI wording can vary; source facts and approval conditions must remain correct.

Values and prompts follow the notes. Replace source placeholders before submitting. Inspect proposed edits before applying them. Drafting does not authorise sending, inviting people or publishing.

Course Timing

This course is planned for 1 day, with 390 teaching minutes per day, excluding breaks and lunch. Estimates include practice, checks and discussion and need a classroom pilot.

Each course supplies independent starting inputs. Use a stated recovery file if an earlier output is missing.

Expanded Casework

Revision 0.4 adds casework, independent challenges and evidence gates to every chapter. The original short guided path alone is insufficient. Timings are targets, not measured learner results. Read each case input and keep baseline and scenario files separate.

01

CHAPTER 1

Read the Brief and Plan the Story

In this chapter you will choose the audience, decision and evidence; use Gemini to propose an outline.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 40 minutes: 10 explanation/demonstration, 10 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 30 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A six-slide story plan with a decision request and source evidence.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Choose a presentation decision.
- Plan evidence before slide decoration.
- Use AI to propose a bounded outline.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Open checked brief and TaskRegister.xlsx. This specialist course supplies its own inputs.

1.1 Read the Decision

1. Identify the sponsor as the audience. Write the requested decision in one sentence.
2. Separate the pilot's purpose from its success measure and unresolved approvals.
3. Choose which facts the audience must know before deciding.

> **What should you see?**
>
> Your requested decision concerns budget approval and a start date, not a purchase order.

1.2 Plan the Narrative

1. Write a six-slide plan: Purpose, Pilot Scope, Current Tasks, Risk, Decisions and Next Steps.

2. Give each slide one main message and list its source.
3. Use the Part 2 prompt if available. Compare the proposal with your own plan and remove unsupported claims.

What should you see?

Each planned slide has a useful job and an identifiable source.

1.3 Check the Outline

1. Check that the plan does not invent a launch date or a numerical saving.
2. Keep the proposed RM 12,000 ceiling explicit.
3. Rehearse the plan aloud in one minute before creating the deck.

What should you see?

The audience can understand the purpose and decisions before seeing detailed design.

1.4 Build an Audience and Evidence Storyboard

1. Create a planning Doc with columns Slide, Audience question, Main message, Evidence and Visual approach. Populate all six planned slides before opening the theme gallery.
2. Write the sponsor's two unresolved decisions and the information needed for each. Separate a budget proposal from evidence of approval.
3. Create a claim inventory from the fact sheet and the 12-task workbook. Mark task status as a dataset snapshot, not evidence that the four-week pilot has succeeded.
4. Read the stakeholder requests on the card and classify each as supported, proposed or unsupported. Record the source phrase for each supported claim.
5. Draft a 60-second opening and a 30-second closing request. Keep the proposed budget and unresolved date in both where relevant.
6. Plan one appendix slide for source definitions and one audience question the evidence cannot answer. Explain why these are support material rather than part of the main story.
7. Walk a partner through the storyboard without slide decoration. Record where the decision logic is unclear and revise the sequence or message.

What should you see?

Six-slide evidence storyboard with two planned appendix topics. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Independently prepare a three-slide version for a sponsor with only two minutes available. Identify which evidence moves to notes or an appendix and why.

2. Compare the short and full outlines for all required facts. Restore any qualification lost through compression.
3. Write a response to the unsupported request on the card, including what evidence would be needed to make that claim.

Evidence to Hand Over

- Six-slide evidence storyboard with two planned appendix topics.
- Opening, decision request and a justified three-slide alternative.
- Stakeholder-claim classification and one recorded narrative revision.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A polished outline lacks a decision	Return to the sponsor’s open questions and identify which slide supplies evidence for each.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

The story plan gives the deck a purpose and an evidence base.

Check yourself: What decision should the sponsor understand at the end?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 2: Propose an Outline

Session: new chat | **Grounding:** pasted checked brief

```
Goal: Suggest a six-slide sponsor update.
Context: Fictional reporting pilot.
Source: Only the checked brief below.
Expectations: Reply in the panel only. Give one main message and a source fact per slide.
Preserve unresolved approvals and dates. Do not invent benefits or status counts.

BRIEF:
[paste checked-brief.txt]
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Stakeholder requests: Explain the three teams; show current task counts; say the budget is
approved; promise a 40% efficiency gain. The sources support the teams and task snapshot, but
provide no approval or measured gain.
```

02

CHAPTER 2

Create and Organise the Deck

In this chapter you will apply a theme, manage slides and import a supplied slide while checking its formatting.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 45 minutes: 10 explanation/demonstration, 15 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 35 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A named deck with a consistent theme and organised delivery sequence.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Create a named deck and theme.
- Organise slides and layouts.
- Compare imported formatting with a destination theme.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the six-slide plan from Chapter 1. If no prior plan is available, use its six named topics.

2.1 Create the Deck

1. Create a blank Slides presentation named `GW - Slides - Sponsor Update`.
2. Choose a simple theme from the theme panel.
3. Create six slides and assign a layout suited to each planned topic.

What should you see?

The deck has six identifiable slides in the planned sequence.

2.2 Manage the Sequence

1. Duplicate the Risk slide. Add an alternative title and move the copy after Decisions.
2. Skip the duplicate slide using its context-menu option so it stays out of the main delivery.
3. Delete only the duplicate after comparing the alternatives, or retain it skipped as backup.

What should you see?

The main delivery sequence remains six slides; optional backup content is clearly handled.

2.3 Practise Importing

1. Create a second disposable deck with one title slide labelled `Fictional training example`.
2. In the working deck use File, Import slides and choose that disposable source.
3. Compare keeping the source theme with adopting the destination theme. Remove the extra imported practice slide when finished.

What should you see?

You can explain the formatting choice without mixing an unrelated slide into the final story.

2.4 Create a Reusable Deck Structure and Import Test

1. Add two appendix slides to the six-slide working deck. Give each a clear title and keep main-story and support slides distinguishable in the filmstrip.
2. In a disposable deck inspect **Slide**, **Edit theme** and the available theme colours. Set a practice accent colour, then compare a theme-linked object with one manually coloured object.
3. Apply the intended theme to the working deck and use consistent layouts for title, evidence and decisions. Record which objects require a manual correction after theme changes.
4. Create a deliberately different source slide with a different theme and an informative title. Import it twice: once keeping its original theme and once adopting the destination theme.
5. Compare text, background and object formatting on the two imports. Choose the suitable version and keep only the useful practice result as a skipped appendix slide.
6. Create a simple navigation link from a decision slide to the source-definitions appendix and a return link. Test both in presentation mode.
7. Duplicate the deck as a clearly named reusable structure. Remove case-specific narrative only from that copy and add descriptive placeholders for messages, sources and decisions.

What should you see?

Working deck plus clearly separated reusable structure copy. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. A new training topic needs the same six-part structure but a different accent colour. Adapt the structure copy without changing the original evidence deck.
2. Import one additional practice slide and repair theme inconsistencies. Demonstrate the retained main sequence and skipped support material.
3. Write a short reuse note identifying what is controlled by the theme and what a future author must inspect manually.

Evidence to Hand Over

- Working deck plus clearly separated reusable structure copy.
- Keep-theme/adopt-theme comparison and checked appendix navigation.
- Independent theme adaptation with the original deck preserved.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
Changing the theme leaves inconsistent objects	Inspect manually formatted elements separately from theme-linked placeholders.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

A consistent deck structure makes content editing and later review easier.

Check yourself: Why can an imported slide look different from the rest of a deck?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
GW - Slides - Sponsor Update
```

```
Fictional training example
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Reuse brief: Keep the six-part story structure, source-note placeholders and appendix
navigation. Use a new accent colour and a new topic title only in the reuse copy. No old
project evidence should accidentally appear as evidence for the new topic.
```

03

CHAPTER 3

Build Clear Slide Layouts

In this chapter you will create a title, progress, risk and decision slide with a consistent visual hierarchy.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 55 minutes: 10 explanation/demonstration, 25 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 45 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: Readable core slides with supporting speaker notes.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Use a layout hierarchy.
- Align objects and reduce crowded content.
- Write evidence-based slide titles.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Open the working deck and checked brief.

3.1 Build the Core Messages

1. Write a descriptive title on Purpose and a short explanation of the reporting pilot.
2. On Pilot Scope, show the three team names and four required outputs.
3. On Decisions, state that the budget ceiling is proposed and the start date needs agreement.

What should you see?

The slide messages match the source and are understandable without decorative icons.

3.2 Arrange the Content

1. Use layout placeholders for related text. Keep body text large enough to read during presenting.

2. Select related objects and use Arrange alignment/distribution options where needed.
3. Reduce a crowded paragraph to short phrases while keeping the full evidence in speaker notes.

What should you see?

The slides have consistent alignment and sufficient whitespace. No text extends off the slide.

3.3 Review Titles and Notes

1. Change vague titles such as Update to titles that describe the slide's finding.
2. Add speaker notes with the source facts behind each claim.
3. Present the deck and inspect line breaks, contrast and object placement.

What should you see?

Each slide communicates one point and has supporting notes.

3.4 Redesign Dense Content Without Losing Evidence

1. Copy the dense slide text on the card to a separate practice slide. Make a first layout that preserves the full paragraph for comparison.
2. Create a second version using one descriptive title, no more than three main points and a decision callout. Move supporting detail to speaker notes rather than deleting source qualifications.
3. Build a consistent three-column team layout using aligned shapes and short text. Use **Arrange** alignment and distribution to make spacing intentional.
4. Create a four-step output diagram and use text labels to connect the brief, register, update and hub. Avoid implying that these are already approved systems.
5. Inspect both slides in **Present** mode at the available viewing size. Record the smallest labels or densest regions that impede reading.
6. Write a 45-second explanation in notes that adds useful context rather than repeating the slide verbatim. Include a source reference for the budget caveat.
7. Ask a reviewer to state the slide’s main message after a brief look. Compare their answer with your intended message and revise layout or title.

What should you see?

Dense and redesigned alternatives with an explicit meaning audit. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Redesign the Decisions slide independently so budget approval and date agreement are visible as two separate requests.
2. Keep a before-and-after copy and audit every numeric or approval phrase for meaning changes.

3. Test the revised slide with a reviewer or a fresh read-through and document one change made because of that test.

Evidence to Hand Over

- Dense and redesigned alternatives with an explicit meaning audit.
- Aligned team layout, output diagram and useful speaker notes.
- Two-decision slide supported by a recorded message-retrieval test.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
The short version removes “proposed”	Move detail into notes while retaining approval conditions visibly on the decision slide.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Clear hierarchy and checked titles make the deck easier to follow.

Check yourself: Which information belongs in speaker notes rather than on the slide?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

This chapter uses the supplied files and visible controls. No additional prompt or typed code is required.

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Dense draft: “Seri Maju Projects in Petaling Jaya proposes a four-week Project Reporting Pilot covering Planning, Procurement and Site Coordination, with a brief, task register, weekly update and hub, a proposed RM 12,000 ceiling still awaiting approval, a start date not yet agreed and Friday updates, aiming for all three teams on time in the final two weeks.”
```

04

CHAPTER 4

Create and Check Visual Assets

In this chapter you will insert media, try an AI image where available and document image provenance.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 55 minutes: 10 explanation/demonstration, 25 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 45 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A useful diagram or reviewed image with provenance and alternative text.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Insert images and media deliberately.
- Review a generated visual.
- Keep provenance and alternative text.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the working deck. Only use supplied, self-created or otherwise permitted media. AI generation is optional where unavailable.

4.1 Choose a Useful Visual

1. On the Pilot Scope slide, decide whether a simple diagram explains the workflow better than a photo.
2. Use shapes and connectors to show source register, checked update and project hub.
3. Label each stage so meaning does not rely on colour alone.

What should you see?

The diagram clarifies the workflow without suggesting unsupported technical automation.

4.2 Try a Generated Image

1. If available, open Ask Gemini or the image-generation option in Slides. Request a generic illustration of an office team reviewing a fictional project register, without brands or identifiable people.
2. Inspect the result for distorted text, unintended logos and misleading site-safety details.
3. Insert only a useful image. If no suitable result is available, keep your diagram instead.

What should you see?

Any generated visual is treated as an illustration and has been reviewed.

4.3 Check Media and Provenance

1. Add a note identifying whether each visual was self-created, supplied or AI-generated, with its source or prompt.
2. Add meaningful alternative text to informative images through the available image options.
3. If the trainer supplies a permitted video link, practise inserting it and test playback. Do not depend on an untested external clip for the main story.

What should you see?

The deck records visual provenance. It makes no blanket copyright-free claim.

4.4 Produce Visuals With a Clear Information Purpose

1. Write a one-sentence purpose for each planned visual: explain process, compare quantities or illustrate context. Reject a visual that has no useful role.
2. Build two workflow diagrams from shapes: a linear Collect → Check → Report flow and a responsibility-based layout. Add the same source-of-truth and exception route to both.
3. Compare which diagram better answers the contributor's question about where to correct a bad status. Keep the clearer design and note the reason.
4. Prepare a visual register with Asset, Purpose, Origin, Rights/reuse status and Text alternative. Record self-created diagrams as such; do not treat AI generation as a rights guarantee.
5. If available, generate a purely illustrative image from the bounded prompt. Inspect text, logos, people and implied context. If not available, use your self-created diagram and record the fallback.
6. Crop or resize any retained illustrative image without removing the information needed for its purpose. Add a text alternative to informative content.
7. If a permitted training video is available, insert and test it in a copy, then create a static explanation for when playback fails. If none is available, document the media dependency rather than selecting an arbitrary external video.

What should you see?

Two compared process designs and one independently built exception diagram. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Design an independent exception diagram for “unclear status → clarify → update source → recheck report”. Use labels that work without colour.
2. Have a reviewer identify the correction point using the diagram alone. Repair an ambiguous connector or label.
3. Record the selected diagram, rejected alternative, origin and fallback in the visual register.

Evidence to Hand Over

- Two compared process designs and one independently built exception diagram.
- Visual register with origin, reuse uncertainty and text alternatives.
- Reader comprehension result plus a media fallback or explicit untested dependency.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A decorative image is treated as evidence	Keep data and process evidence in labelled charts/diagrams and identify illustrative media explicitly.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Visuals should support the message and carry a clear source record.

Check yourself: What must you check before treating an AI-generated image as suitable for a real presentation?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

This chapter uses the supplied files and visible controls. No additional prompt or typed code is required.

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Visual brief: Help a new coordinator understand where an unclear task status is corrected. An office photograph may illustrate context but cannot show the correction path. No visual may imply real construction activity, a confirmed launch or an approved purchase.
```

05

CHAPTER 5

Link and Explain Project Data

In this chapter you will insert a linked Sheets chart, change source data and explicitly refresh the chart.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 55 minutes: 10 explanation/demonstration, 25 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 45 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A linked status chart whose refresh behaviour has been tested and restored.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Create a chart from a supplied register.
- Keep a chart linked across apps.
- Test refresh and restore the baseline.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Upload TaskRegister.xlsx and save a native Google Sheets copy. The starter Summary has three status labels with blank count cells.

5.1 Prepare the Source Chart

1. In Summary B2 enter `=COUNTIF(Tasks!$F$2:$F$13,A2)` and fill through B4.
2. Select Summary A1:B4 and insert a column chart titled `Pilot task status`.
3. Confirm all three categories have four tasks.

What should you see?

The chart is based on source-linked cells and accounts for 12 tasks.

5.2 Insert the Linked Chart

1. Copy the chart from its menu. Paste it onto Current Tasks in Slides.
2. Choose Link to spreadsheet when prompted. Resize it without cutting off labels.
3. In speaker notes, identify the source register and explain the status definitions.

What should you see?

The slide has a linked chart rather than a pasted screenshot.

5.3 Test the Refresh

1. Temporarily change T003 to Complete in Tasks and check the source counts become 5, 4 and 3.
2. Return to Slides, select the chart and use Update. Check the category labels as well as the numbers.
3. Restore T003 to Not Started and refresh again. Explain what happens if a viewer sees an old downloaded deck.

What should you see?

The final slide shows 4/4/4 after restoration. Refresh has been tested in both directions.

5.4 Extend the Source and Audit Every Representation

1. Before changing data, write a baseline log containing the 12-task counts, chart source URL and the Slides destination. Confirm all three statuses have four tasks.
2. Create a second summary for planned cost by team using SUMIF over Tasks B2:B13 and G2:G13. Reconcile the three teams with RM 10,400 before charting.
3. Insert the team-cost chart into a skipped evidence appendix, linked to the working spreadsheet. Add a source note distinguishing cost records from the unapproved budget proposal.
4. Make a static pasted-image copy of the status chart on a separate skipped comparison slide. Label it **Static comparison only**.
5. Change T003 temporarily and compare the source, linked chart and static image. Record which destination offers an update and which remains frozen.
6. Restore T003 and update the linked object. Delete or clearly retain the static copy only as a labelled comparison.
7. Create an evidence checklist for category labels, population, units, source identity and refresh state. Use it on both charts.

What should you see?

Two checked linked charts and a documented static-versus-linked comparison. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. On a separate source-and-deck challenge copy, append T013: Planning, Check the handover, Aina Rahman, week 4, Not Started, planned 200, actual 0.
2. Diagnose and repair every affected source formula range, then refresh both linked charts. Check whether the copied deck's charts still point to the original spreadsheet; reinsert from the challenge source if needed.
3. Rewrite the task-count and planned-cost commentary to match the new population. Leave the original 12-row source and baseline deck unchanged.

Evidence to Hand Over

- Two checked linked charts and a documented static-versus-linked comparison.
- Separate 13-record source/deck challenge with verified link identity.
- Consistent chart labels and narrative after the new-row change.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
The challenge chart still reads the baseline	Inspect the linked source URL and insert the chart from the intended challenge spreadsheet.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

The source chart controls the data; the presentation needs a deliberate refresh check.

Check yourself: How can you tell whether a chart is stale rather than wrong?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
=COUNTIF(Tasks!$F$2:$F$13,A2)
```

```
Pilot task status
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
New-record challenge: T013 | Planning | Check the handover | Aina Rahman | 4 | Not Started | 200 | 0. This belongs only in the challenge copy. A copied presentation may keep links to its original source; prove the source identity.
```

06

CHAPTER 6

Polish Motion and Review

In this chapter you will apply restrained transitions and animations; inspect contrast, reading order and version history.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 45 minutes: 10 explanation/demonstration, 15 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 35 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A polished, accessible deck with a named review milestone.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Apply restrained transitions and animation.
- Check reading order and contrast.
- Use version history during review.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the working presentation with its source chart restored.

6.1 Add Deliberate Motion

1. Select a slide and open the transition control. Choose one simple transition.
2. On the workflow diagram, apply one object animation only if it helps explain the sequence.
3. Preview the motion and confirm it does not hide a required fact until after the audience needs it.

What should you see?

Motion supports the explanation without slowing every slide.

6.2 Inspect Accessibility

1. Check contrast, text size and whether status meaning relies on colour alone.
2. Use the object order and keyboard navigation to inspect the logical reading sequence.
3. Add or improve alternative text for the chart and diagram.

> **What should you see?**
>
> Labels and text convey the meaning of the visual content.

6.3 Review a Milestone

1. Make one wording improvement and inspect version history.
2. Name the checked version `Sponsor update reviewed`.
3. Compare an earlier version without restoring it over your checked deck. Return to editing.

> **What should you see?**
>
> The current checked deck remains intact and a named milestone is available.

6.4 Test Motion, Reading Order and Review Decisions

1. Make a practice copy of the workflow slide. Prepare one no-animation version and one version that reveals stages in sequence.
2. Write a reveal script stating which audience question each animation answers. Remove an effect with no instructional purpose.
3. Use **Present** mode to count how many advances are needed and whether the decision is hidden at the moment you ask for it. Record the observed result.
4. Inspect object reading order with keyboard navigation. Compare the order reached by Tab with the logical title → explanation → evidence sequence.
5. Reorder objects if needed and retest. Keep informative alternatives and labels available even when a colour distinction or animation is missed.
6. Add a review comment explaining the selected motion treatment. Make a factual wording suggestion from the card and reject it if it changes an unresolved commitment.
7. Name the reviewed version and create a short checklist for transitions, animation steps, reading order and factual invariants.

> **What should you see?**
>
> Compared static/reveal alternatives with a reasoned selection. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Audit an entire delivery sequence without editing during the first pass. Log three findings across motion, reading order or clarity; if fewer defects exist, record supported no-change checks.
2. Repair the consequential findings and repeat the reveal sequence from the beginning.
3. Explain how you would deliver the same message if motion were unavailable.

Evidence to Hand Over

- Compared static/reveal alternatives with a reasoned selection.
- Keyboard order check and documented repair or no-defect result.
- Full-sequence audit and a usable static delivery fallback.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
A reveal delays essential context	Change the sequence or keep the critical qualification visible throughout.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

Polish includes accessibility and review history as well as visual effects.

Check yourself: Which motion effect improves understanding rather than decoration?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

Part 1: Typed Values

```
Sponsor update reviewed
```

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Review request: “Animate each decision one at a time, and change the final request to ‘Thank you for approving the budget’.” Consider the reveal separately from the unsupported approval wording.
```

07

CHAPTER 7

Rehearse and Distribute

In this chapter you will use presenter view, notes and audience tools; compare restricted sharing with public publishing.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 45 minutes: 10 explanation/demonstration, 15 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 35 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A rehearsed delivery and a documented distribution choice.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Use presenter view and notes.
- Inspect audience tools.
- Distinguish file access from public publishing.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the checked deck. No real audience invitations or public publication are required.

7.1 Rehearse with Notes

1. Open the Slideshow menu and choose Presenter view.
2. Check the notes and slide progression. Practise the opening and the decision request.
3. Check the skipped backup slide does not appear in the main sequence.

What should you see?

You can deliver the deck while using notes without displaying them to the audience.

7.2 Inspect Audience Tools

1. In presenter view, inspect available audience/Q&A controls.
2. Explain whether enabling a session would create an audience link; leave it unstarted unless assigned by the trainer.
3. Return to editing and inspect the Share dialog without changing access.

What should you see?

You know which operation would share a file or start an audience interaction.

7.3 Compare Distribution Choices

1. Inspect the Publish to web option through the File sharing menu if available, then cancel before publishing.
2. Compare a restricted file link, downloaded PDF and published presentation.
3. Record which option suits the intended audience and what evidence must be checked before distributing it.

What should you see?

Your deck remains at its existing sharing level and is not publicly published.

7.4 Rehearse an Accessible Delivery and Test Distribution

1. Write a three-minute run sheet with opening, evidence, risk, decision request and time checkpoints. Use actual notes and navigation rather than reading the slide text.
2. Perform a first timed rehearsal and record total speaking time, one hesitation and any unnecessary advances. Exclude unrelated interruptions.
3. Practise moving from a decision slide to an appendix and back without restarting the presentation. Confirm skipped slides remain out of the normal sequence.
4. Prepare answers to the three sponsor questions on the card. Give a source or explicitly state that the evidence does not answer the question.
5. Inspect restricted sharing, downloadable PDF and the publishing option without publishing. Write the intended audience, update behaviour and access implications of each.
6. Export a delivery PDF and test its visual sequence and any internal links. Check whether skipped slides appear in the export and record the actual result; prepare the intended handout scope accordingly.
7. Run a second rehearsal using the fixed PDF as a fallback. Note which presenter features, motion or notes are unavailable and adapt the delivery.

What should you see?

Two timed rehearsals with specific delivery improvements. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. A reviewer needs a current fixed handout and a presenter needs an editable source. Prepare a release manifest identifying each file, revision and intended use.
2. Deliver the opening and decision request once more using the fallback. Correct any claim whose qualification became unclear.
3. Demonstrate how you would recognise a stale downloaded copy after a source update.

Evidence to Hand Over

- Two timed rehearsals with specific delivery improvements.
- Three source-based or explicitly unresolved sponsor answers.
- Inspected handout scope, fallback delivery and release manifest.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
The handout contains unwanted backup slides	Inspect export scope and build a separate delivery copy with the intended slide set.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

A rehearsed deck and deliberate distribution choice complete the presentation workflow.

Check yourself: Why is publishing to the web a different decision from sharing with named reviewers?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

This chapter uses the supplied files and visible controls. No additional prompt or typed code is required.

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Sponsor questions: Does four Complete tasks prove the pilot succeeded? Is RM 12,000 approved?
What is the confirmed start date? Explain exactly what the source pack supports.
```

08

CHAPTER 8

Deliver the Project Update

In this chapter you will deliver the update, answer an evidence question and revise one slide after feedback.

> **Prompts and values:** use the copy-paste page for the exact values used below.

Target allocation: 50 minutes: 10 explanation/demonstration, 20 guided build and casework, 15 independent challenge, 5 verification and repair. The active portion is 40 minutes by design. These are unmeasured targets awaiting a learner pilot.

Your result: A delivered update revised from specific feedback.

> **Status:** expanded review draft, revision 0.4. Complete the casework and independent challenge as well as the guided steps. The expanded route, screenshots and timing have not yet been validated in the learner application.

What You Will Learn

- Deliver an evidence-based update.
- Answer a source question.
- Revise from useful feedback.

Before You Begin

Read the case input and use a separate named casework copy for destructive tests or altered datasets. Keep the baseline unchanged for later chapters. Record source facts, proposed practice and unresolved questions separately.

Use the checked six-slide deck and keep the source brief and register available.

8.1 Deliver the Story

1. Give a three-minute update covering purpose, current tasks, risk and decisions.
2. Keep the proposed budget and unresolved date explicit.
3. Use the chart to explain the current 12-task baseline rather than claiming pilot success has already occurred.

What should you see?

The update is clear about the current evidence and required decisions.

8.2 Answer and Verify

1. Ask a partner to question one number or statement.
2. Show the source cell or brief sentence supporting the answer.
3. If the source does not answer a question, say what remains unknown rather than inventing a figure.

What should you see?

Your response can be traced to supplied evidence or a clearly identified gap.

8.3 Improve the Deck

1. Record one specific piece of feedback.
2. Revise the relevant slide and inspect its layout and facts again.
3. Name a final practice milestone and leave the deck in its checked state.

What should you see?

The revision improves the presentation without changing the source facts.

8.4 Handle a Last-Minute Sponsor Change

1. Duplicate the checked baseline deck and record the source URL of each linked chart before editing the copy.
2. Read the final change brief and classify its requests as editorial changes, data changes or unsupported claims. Write an impact list.
3. Prepare a two-minute delivery version while preserving source caveats and a useful decision request. Move detail into notes or the appendix as appropriate.
4. On a separate data copy change T003 to Complete, refresh/reinsert the intended linked chart and update the narrative. Verify source identity before claiming the deck is current.
5. Audit the changed deck's facts and scope. Do not change the budget or date merely because the change request asks for more confident wording.
6. Rehearse with one challenge question from a reviewer. Locate the supporting cell or source sentence instead of improvising a benefit claim.
7. Export a revised handout and compare it with the native deck. Label both as the changed scenario, leaving the original baseline intact.

What should you see?

Change classification, impact list and two-minute revised narrative. The result must be supported by the recorded checks; an attractive output or an AI assurance is insufficient.

Independent Challenge

Close the earlier step lists for the first attempt. Use the case input and your own reasoning. If you need help, record the hint and repeat the affected check independently.

1. Deliver the two-minute changed-scenario update without the chapter instructions. Ask a reviewer to identify the requested decisions and the evidence population.
2. Use their feedback to make a targeted revision and repeat the critical part of the delivery.
3. Hand over a source map, revision manifest and open-question list. Explain how to restore the baseline and why a PDF does not restore itself.

Evidence to Hand Over

- Change classification, impact list and two-minute revised narrative.
- Verified changed-scenario chart, source notes and matching handout.
- Reviewer result, targeted improvement and reproducible handover.

Record the defect or uncertainty you investigated, the evidence used, the repair or reasoned no-change decision, and the final state. Restore temporary changes or keep them in a clearly named scenario copy.

Troubleshooting

Symptom	What to check
The change request is treated as evidence for every claim	Separate the explicit task-status scenario from unsupported approval and outcome assertions.
An input or earlier result is missing	Reopen the input named in Before You Begin; do not substitute private company data
A menu or feature is unavailable	Confirm the account and the shared access notes; record the missing step and ask the trainer for its fallback
The result differs from the checkpoint	Compare the exact source range, wording and conditions before repeating the action

Lesson Summary

You planned, designed, checked and delivered a concise project presentation.

Check yourself: Can another person identify the decision request after hearing your update?

Prompts and values

Copy the values below when following the chapter. Review pasted text before submitting it.

This chapter uses the supplied files and visible controls. No additional prompt or typed code is required.

Depth Case Input

Fictional training material. This is exercise content to analyse, not authorisation to send, publish, grant access or change a real project decision.

```
Final brief: Reduce the update to two minutes. In a scenario copy, T003 becomes Complete. A stakeholder also requests the phrases “approved budget” and “pilot already successful”. No new approval or reporting-performance evidence accompanies those phrases. Keep the original baseline separate.
```

Google Slides

A practical 1-day course with step-by-step draft labs, copy-ready prompts, fictional inputs and expected-result checks. Use the supplied practice pack. Full lab execution, screenshots and classroom timing validation remain required before participant release.

Asraf Jaafar Sidik · Microsoft Certified Trainer ·
